Atkinson's Saturday Evening Post

A FAMILY NEWSPAPER, DEVOTED TO LITERATURE, SCIENCE, MORALITY, NEWS, AGRICULTURE AND AMUSEMENT.

Vol. XV. PHILADELPHIA, MAY 14, 1836. Whole No. 772.

Capitol of Virginia, at Richmond.

The first permanent settlement in Virginia, dates in 1608. It was [illegible] by the King [illegible] period; but the attempts for a colony failed. Newport was built on James River at that period, about forty miles from the sea. But Captain John Smith, who was there a little later, may justly be considered the principal man in effecting a settlement. There is no very large city in Virginia, as in most of the other states. Richmond, the seat of government, is the largest, with a population of 16,000. Norfolk, the largest commercial town, has about 10,000 inhabitants; and is situated near the mouth of James river. Richmond is at the head of the tide water, on the same river. It rises gradually from the river, and has a fine appearance. Two bridges cross the river at Richmond.—"Most of the houses are brick and many are elegant.—The public buildings are a court house, a state prison, an almshouse, a museum, eight churches, and the Capitol. This is considered an elegant structure.—It stands on the highest ground in the city, and the prospect from it is extensive and interesting." Richmond is about one hundred and twenty miles from Washington city, and one hundred and fifty from the mouth of the river. It was a place of considerable business. There are falls to the river, not far above Richmond; but a canal has been made round them and a boat navigation is thus secured for two hundred and twenty miles. This adds much to the trade and prosperity of the city. There are good schools in Richmond, and convenient houses of worship belonging to different sects. The constitution of Virginia has lately been revised and altered; but the changes are not very material. The interior of the state is filling up with inhabitants; and the population west of the Blue Ridge is even now the greatest. Virginia has been rich in great men; among the most distinguished were General Washington, Patrick Henry, Arthur Lee, Richard H. Lee, George Wythe, Thomas Jefferson, James Madison, James Monroe, and John Marshall.

Selected for the Saturday Evening Post.

ELEGY,

On the death of a lady who suddenly departed this life while her consort was absent beyond the sea.

Partner of my joy and sorrow,
Whither, whither hast thou fled;
Oh! the scene of devastation!
Home, a mansion of the dead!

Yesterday, my babes were prattling!
Mirthful, in the merry room—
Kindest mother watching o'er them—
All is now sepulchral gloom.

Pleasant was the light of morning,
Joy sat smiling on the scene;
Happy hours of contemplation,
Now what horrors intervene.

Cruel fate! why didst thou tempt me,
O'er the torrid clime to roam,
To feel affection's sudden power,
In a desolated home?

Partner of my joy and sorrow,
Whither, whither hast thou fled;
Tis the realms of peace eternal—
By the guardian angel led.

Thou hast joined the seraph choir,
Who with sweet symposiacal lays,
In Jehovah's holy presence,
Chaunt his everlasting praise.

We must soon prepare to follow—
Yes, and all must soon prepare—
Scenes of blisse! shall we behold them,
Shall we in their glories share?

Rest thee, blessed spirit—rest thee;
All thy earthly woes are o'er,
Now receive the crown immortal
Praise thy God for evermore. Edwin.

For the Saturday Evening Post.

THEATRE ST. CHARLES,

NEW ORLEANS.

Imagine yourself [illegible] way, standing with Bourse and Gardens streets. Before you, rising in imagery, is the Theatre St. Charles, occupying a line of one hundred and thirty feet, running back one hundred and eighty. The whole elevation is seventy feet. Along the front, extends a magnificent portico, of ten lofty columns, after the Corinthian order, supporting a massive entablature which is surmounted by ten colossal statues, representing the nine muses and the god of music. Above the entablature, a terrace area, the whole length and width of the colonade, communicates with a saloon one hundred and thirty feet long, twenty-six wide, and twenty-two in height. The front of the building, superior to the portico, is stone in the Roman order, no parting an imposing pediment in the same style.

Five spacious entrances lead into a large hall, intersected with columns after the simple Doric order. This beautiful vestibule rises to the height of twenty feet. On the right, as you enter, is the box office.—Before you is a flight of eighteen steps, leading through three large doors to a semi-circular hall, twelve feet in width, communicating with the pit, parquette, and begnoria or latticed boxes. The parquette consists of seven passages, parallel with the proscenium, containing each thirty-one bottom machine chairs. An aisle at each end of these passages, [illegible] easy access to the seats. The floor is nearly level, yet from all points of the parquette an uninterrupted view of the stage is enjoyed. On either side of the parquette are three large boxes concealed by lattice work. Dorval to the parquette are the pit and lobby, capable of holding five hundred persons. The pit seats are rush-bottomed, and provided with backs. It must be observed here, that two contiguous walls rise from the foundation of the building the whole height of the boxes. Between them is the semi-circular hall above alluded to; the pit, lobby, the begnoria and private boxes are all thrown in advance of this area. The orchestra is fourteen feet in width, running the whole length of the proscenium. It will accommodate fifty musicians, and communicates with a music room on the ground floor, fifty feet long, twenty-two in width.

But to return by way of the semi-circular hall to the Doric vestibule. On either hand, an elliptical staircase of thirty-four steps, gracefully winds to a large area decorated with a series of Ionic columns. In the centre of this vestibule is an octagonal balustrade, affording an opening that looks into the hall below. The height of this Ionic square is sixteen feet. An elegant chandelier lighted by gas hangs over the opening from a richly ornamented ceiling.

Mounting a flight of three steps, you are in the main hall of the first tier of boxes, extending semi-circularly around the auditorium. From this hall or lobby, solid mahogany doors after the Greek style, are ornamented with rose wood mouldings, lead to boudoirs or retiring rooms. The rooms are elegantly furnished, and covered with Brussels carpet. From the boudoirs, by removing a crimson curtain, that slides on a burnished rod, you enter the boxes or lodges for the accommodation of the spectators. The door of the boxes consists of three plate glasses of easy descent, and sufficiently wide to receive a chair. There are from eleven to twelve chairs in each box. The chairs throughout the house are of the same description as those in the parquette. Every box is carpeted—the proscenium boxes are larger than the rest, and more magnificently furnished. In the first tier are nineteen—each with its boudoir—on his [illegible] as the ladies' well-adapted room, simply and comfortably furnished. In the semi-circular passage, [illegible] ways ascend to the second tier of boxes by a flight of twenty-four steps. A similar division of the boxes takes place with those of the first tier, with the exception of the seven centre lodges; which are thrown into an amphitheatre form, furnished with cushioned seats. This space will accommodate upwards of three hundred persons. It is only visited by gentlemen, and the price of admission is on a par with that of the pit.

It is from the floor of the second tier of boxes, that the entrance to the grand saloon is gained by four spacious doors. This room is richly furnished, and adorned with groups of statuary. It is the fashionable promenade, and may be regarded as the *chef d'oeuvre* of architectural elegance. No Theatre in the world can boast of a larger saloon.

From the semi-circular hall, is a continuation of four stair-ways by twenty-one steps to the third tier. Here is an amphitheatre corresponding to the one in the tier below. On the right and left are boxes or boudoirs, similar to those in the first circle.—The boudoir in the Theatre is furnished with gas [illegible]

The entrance to the gallery or fourth tier is on the side of the building, and rises by a flight of nineteen steps. On this floor over the grand saloon is a room for the accommodation of the vestals [illegible] part of the house. Continuing along the gallery, you gain access to the music room.—[illegible] stair way will lead you thence to the stage—an object that attracts your attention is the secret door from the carpets to the extremity of the stage [illegible] entrances. The wings have a lateral movement, so that the stage can be narrowed or widened at pleasure. The *Skies* or artificial ceiling over the stage varies from twenty to forty feet in elevation [illegible] representation of Gustavus, or the Masked Ball, [illegible] forty feet high, eighty-two feet wide and twenty-six feet long, is thrown open with a double row of Corinthian columns, extending up the stage—the whole is illuminated by gas chandeliers. Thus it will be seen, that the stage is capable of all the [illegible] required in the exhibition of *Grand Spectacle, and Historic Tragedy*, wherein, "the pomp, the pride, and circumstance of glorious war," pass across the scene; and when occasion demands, it can be reduced to the limits that comedy, farce, and domestic tragedy require.

On the same floor with the stage, are two green rooms, elegantly furnished. Ascending a winding stair way on either side of the stage, you come to the dressing rooms, wardrobe, centre room, scene rooms, &c. There are twenty-six dressing rooms, all being constructed and completed with a view to the accommodation and comfort of the performer. Leaving this immense wilderness of machinery, you will advance to the front of the stage.

The form of the auditorium is that of a slightly elongated semi-circle, with the diameter resting upon the convex segments of two plain, but perfect, circles, so as to give a bell-shaped appearance to the boxes. Above the proscenium is a flat elliptic arch, supported in part by a centre of the most approved construction. This arch forms the interlocking line between the vault which is conveyed to all parts of the house. The intrados of the arch are towards the auditory, forming the segment of a parabola, having for its transverse diameter the front of the building. This magnificent arch of fifty-four feet span rests upon immense abutments, which are prevented from spreading by strong connections at the heads of the first wooden[illegible]

On either side of the proscenium rise two fluted Corinthian columns, superbly gilded, and supporting an entablature of the same order, vieing in whiteness and delicacy, with the purest Parian marble. They stand on lofty pedestals that to the eye seem like purpled Hesceus. From between the columns gracefully curve the boxes of the proscenium, richly ornamented, and surmounted by massive brass railings, on which play the richest damask curtains. The front of the boxes presents to the eye, the delicate color of the yellow jessamine flower. The ceiling softer and more agreeable. Emblematic scrolls, figures, &c. *à la Greque* and *Parabesque*, are tastefully arranged along the whole area, displayed by the front of each tier. They are done in burnished gold. The first tier of boxes is supported by a series of fluted columns after the plain Grecian Doric, with gilded capitals.—The architrave is ornamented with a delicate fret, [illegible] Doric order. The dentils, the drapery that surmounts each box, is beautifully arranged, the crimson, blue, and yellow, being pleasingly intermingled. Nothing can exceed the splendor and richness of the drapery of the Parisian boxes. The eye seems to repose in conscious grandeur, and the eye is never satiated in gazing on such a fairy-like scene.

The ceiling of the house is a great segment of a circle, divided into spherical panels, richly gilded.—In the centre, is a sculptured garlage work in the shape of a dome. From this is suspended one of the most magnificent chandeliers in the world. It weighs two tons, and is fourteen feet in diameter. The light is dispersed through twenty-three thousand pieces of prismatic flint glass, and emanates from one hundred and seventy-five burners. The principal curtain with its never-ending folds, is of red moreen, and raised by pulleys acting at equal distances along its whole length.

The following tabular view of the dimensions of this vast edifice, will give some idea of its magnitude.

Elevation of the front,	70 feet
Length,	130
Depth,	180
Distance of centre box from curtain,	76
Greatest width of box circle,	71
Height of pit boxes,	9
" of first tier of boxes,	14
" of second tier,	11
" of third tier,	11
" of fourth tier,	10
Whole height of ceiling from the centre of the auditorium,	56 feet
Width of proscenium,	12
Width of curtain,	46
Width of stage from wall to wall,	98
Depth of stage from curtain to wall,	86
Width of proscenium,	53
Height of the centre of the arch from the proscenium,	44
Width and depth of boudoirs,	8 by 10
Depth of lattice,	9
Width of pit and parquette stair-way,	10
Parquette entrances from arcade,	15
Width of box stair-ways,	8
Height of colonade,	33
Width of semi-circular halls,	12
Width and height of principal door-ways,	6 by 9

The architect and superintendent was M. Mondelli, a gentleman, in every way at the head of his profession. He is now the principal artist of the establishment. The corner stone was laid by the president himself on the 5th of May 1835, and under his unremitting zeal and watchful eye, the building was opened on Monday evening the 28th of November, in the same year. When entirely finished, it will be one of the most spendid Theatres in the world; under the spirited management of James H. Caldwell, it is a structure of which every liberal-minded man in New Orleans may justly be proud. Nor is it the structure alone that wins our admiration. It is the production of the le timate drama, within its walls, by the best actors in the country, since the opening, that bears ample testimony to the object of such a Theatre, and secures our warmest approbation. But a higher proof of Mr. Caldwell's intentions is to be found in the fact, that *he has engaged* the whole Italian troop, now in this country, and secured the chief talent of the Havana company, at an expense of $20,000.—The legitimate Opera, will open for the first time in New Orleans, in the month of March. All this is done to, as an experiment, not pecuniarily, but with a liberal hand.

From the Montreal Gazette.

THE FALLS OF THE PASSAIC.

BY WASHINGTON IRVING.

In a wild tranquil vale, fringed with forests of green,
Where nature had lash-ned a soft sylvan scene,
The retreat of the ring dove, the haunt of the deer,
Passaic in silence toll'd gentle and clear.

No grandeur of prospect astonished the sight,
No abruptness sublime mingled awe with delight;
Here the wild flow'ret blossom'd, the elm proudly waved,
And pure was the current the green bank that laved.

But the quiet ruled o'er the thick tangled wood,
And deep in its gloom fixed his murky abode,
Who loved the wild scene that the whirlwind delaun,
And gloried in thunder, and lightning, and storm;

All flushed from the tumult of battle he came,
Where the red men encountered the children of flame,
While the noise of the war-whoop still rang in his ears,
And the fresh bleeding scalp is a trophy he bears.

With a glance of disgust, he the landscape surveyed
With its fragrant wild flowers, its wild-waving shade;
Where Passaic meandrers through margins of green,
So transparent its waters, its surface serene.

He rived the green hills, the wild woods he laid low;
He taught the pure stream in rough channels to flow;
He rent the rude rock, the steep precipice gave,
And hurled down the thrasen the thundering wave!

Countless moons have since rolled in the long lapse of time—
Cultivation has softened those features sublime;
The sac of the white man has lightened the shade,
And dispelled the deep gloom of the thicketed glade.

But the stranger still gazes with wondering eye,
On he rocks rudely torn, and groves mounted on high;
Still loves on the cliffs dusky borders to roam,
Where the torrent leaps headlong embosomed in foam!

From the American Magazine.

WOMEN ARE FICKLE.

FROM THE FRENCH.

It was about ten o'clock, of a fine bright morning, that the Countess of Saisanc awoke. With her lovely white hand she pushed aside the curtains of her bed, and rang for her maid, who instantly took her appearance.

"You are somewhat tardy, Marguerite," said her mistress.

"My lady, I was receiving a visitor, the Viscount d'Aury."

"What, so early, twelve o'clock. For a country house this is be ing in a hurry indeed. For my part, I am not at all anxious to see him. I am going to write a letter."

"But the Viscount is waiting, my lady."

"Let him wait, Marguerite."

Marguerite slowly left the room, and the capricious beauty twisted the following epistle:—

"*Dearest Matilda.*—You are a happy woman not to inhabit this hateful city. I am almost ready to grumble at you, for leaving me here so long. I am in the midst of a racket which will certainly kill me. I am deprived of a sleep even during those hours usually devoted to that purpose.—Pity me, my lovely friend. Pleasure dwells in Paris, and happiness in the country; and trust me, yours is the better of. But I, too, shall soon share your happiness, if the Hermitage, whither we contemplate returning, is nearly finished. I send you the last opera, which would be prettier if it were less fatiguing. Do you know, dearest, that our retreat will be much talked of? Six pretty women, with each twenty five thousand francs a year, and neither of them twenty five years of age, leaving Satan and the world, and its pomps and vanities, and starting off one fine morning to live in a desert, to pray and weep, without rhyme or reason, like St. Frances or St. Jerome, will, I flatter myself, produce some sensation in Paris. When I say pray and weep, I yield my pen to the guidance of my head, as my old fool of a lover, the sacrecoisin, said, wh n he laid his heart and laurels at my feet, of which precious treasures I have no idea of carrying my act. Do not be alarmed, Matilda, you deserve, also, a knowledge of whom I love.

"Do not be alarmed, I know that men only love well in novels, and Werter has ruined me for any lover. It is utterly impossible to love to Paris, one has no time for that sort of thing. I have such a capital theory on that subject that I leave all dangers, and set at defiance the mob of dandies that besiege me. Pray, pray let the hermitage be quite ready. The very streets of Paris oppress, distress me. I am dying to rush about the fields with you, to gather violets and daisies and drink milk. I am more than ever convinced, dearest, that true happiness can only be enjoyed, as M. Lamartine so beautifully says, while still g under a far spreading oak, and looking at peasants dancing on the green.

"To think of love when one has a friend, what a perfect horror. Matilda, I await your orders. Let me have but a line from you, and I set off instantly to join you at our new cot, sweet Hermitage, for which we must select a sweet sweet name. Ah! I had almost forgotten, you must examine our garden, and choose a little shady retreat in it, where I may pass the tedious hours I intend devoted to friendship. My architect has procured me the design of the temple at Tivoli, which I assure you is the truth wonder of the world. You shall see it. I have wasted so much money lately, that it is quite time now to think of economy. Write, write, dearest, and tell me what we shall now be in each other's arms until which happy time, I send you as many kisses as there are drops in the sea.

"Adieu, my dear Matilda.—Henrietta de Saisanc."

This important letter sealed and dispatched, the Countess bethought herself of her visitor.

"My lady," said Marguerite, quietly, "the Viscount is still down stairs. He would not go away. There he stands, with his cap in his hand, waiting for your Uncle to his hand. He says he is your cousin."

"Fool or accomplice, Marguerite?"

"That I dont know, my lady, but he certainly looks like you. He has beautiful dark eyes, and black hair, and a famous pair of mustache s. He is very young, very tall, and very handsome; but for all that I do not admire his mustaches."

"Who asked you to tell me all this nonsense," said the Countess.

"Ah, my lady, my lady, he was standing gazing in perfect ecstacy at your picture."

"Ah, indeed!" laughed forth the beauty.

Madame de Saisanc found her early visitor as Marguerite had described, with folded arms and eyes and tears as riveted on the beautiful portrait that hung in notice the entrance of the lovelee original. It is true that the Countess' pretty little feet touched the ground as lightly and noiselessly as the falling snow flake, but the terrified was a short one. The Viscount pre ented his hand, and bowing either to the necessary or to an uncle, all powerful with Henrietta or to the title of cousin or to the graceful reserve of his own manners, Charles resumed his position as a lady's man in Paris, and in a week's time saw him enlisted among the most assiduous and ardent of the Countess's suitors. His friends saw it with joy and regret. He was then asked him—"Why will you deceive yourself to a coquette, who laughs at your affection, and is talking of excluding herself from the world? Why will you waste your time and your fortune, in those fame who feeds with smiles and contempt? Do you expect to change her nature, and seduce that heart of ice? Charles gaily replied, that it was a pleasant task if you would one of Raphael's lovely Madonnas, but if you want a wife, choose her from among those who do not [illegible] Hermitage, Madame de Saisanc, Madame de Saisanc, Madame de Saisanc, or that would be.

"Charles, you are a fool," was always answered to the truth of these observations, yet every day he grew paler and thinner, and—everything is in the application—every evening, like a slave, he found himself fastened to the fetters, which, in the morning, he flattered himself he had shaken off. The Countess was delighted at the success of her coquetry, and Charles was delighted at the success of his attentions. Exhausted at length by his toward struggles, would not by the sneers and jokes of his friends, cease attending the approaches of the pride of Henrietta. Charles determined to send his latter to the Hermitage, and to make the Countess his wife within a fortnight. All Paris should ring with the tale of a young coxcomb's lowest cut his beauty at the very feet of his mistress. Charles, in his transports, had protested his peace of mind; he could not believe that his fair cousin would so highly cause his death, and such a sad flattered by his love, to have a thought regarded in bloom, and his eyes fire. One morning he dressed himself with extreme care, ordered a Fabien his steed a fine horse, the Marquis, and bought out the Countess was in the adjacent pair of pistols, which having loaded, he repair ed to the house of Madame de Saisanc.

It was about eleven o'clock, and the Countess was in her boudoir surrounded by many mantamakers, who were busy displaying bales of hats, capes, blonde, silks and flowers. In a moment the poor girl forgot all, the world one night have secured the admiring gaze of glasses she bestowed on all these vanities.—There is a show which her daughter of Eve must, and that dearest is love of dress. The coquettish Countess flew bind up to view a blonde scarf, then a delicate rose coloured silk, and with bright and hasty glance upon the heavy actually set before her eyes, testified by broken and involuntary sentences, her admiration and delight. In the midst of her pre occupation, the door suddenly flew open, and in rushed the Viscount.

"Henrietta," he said, coming up to her and speaking in a low agitated tone, "I have come to the point giving up

"To avoid these evils, it appears to me that the most safe, just, and federal disposition which could be made of the Surplus Revenue, would be its apportionment among the several States, according to the ratio of representation."—(President Jackson's Message to Congress, 1829.)

The May number of the Casket, for agents were sent on the 8th inst.—

To Simon Simpson, No. 141 Nassau street, New York, per Union Line.

To Mrs. J. Porter, No. 44 South street, Baltimore, per Citizens Line.

On the 11th inst. to Philip M. Tabb, Richmond, Va. per sloop Union.

To Elisha Field, Boston, Mass. per brig Georgian.

We are indebted to J. B. Sutherland, Esq. for interesting Congressional Documents, relating to the Military and Naval Defences of the United States.

By way of giving some variety to our miscellaneous department, we insert, this week, on our first page, the substance of two speeches lately delivered in Congress, by two great champions of opposing political parties. The speeches embrace very important subjects—the currency—the surplus revenue—and the causes of the present pressure—and our readers, by giving them a careful perusal, will readily be enabled to understand the conflicting opinions which are entertained on these matters, throughout the country, it being fair to presume that Messrs. Webster and Benton have generally embodied the views of their respective parties. Our own opinions agree entirely with those of Mr. Webster, and we think that every unprejudiced reader will agree with us, that Mr. Benton's theory is most fully and unequivocally exploded.

By late arrivals from France we learn that the first instalment of the American indemnification, has been ordered to be paid to the Messrs. Rothschilds, the agents of the United States Government. It amounts to 18,486,666 francs, and will be sent over, it is said, in gold.

FOREIGN PAUPERS.

A petition has been presented to Congress, from the Legislature of Massachusetts, praying for a law to arrest the evils produced by the great and increasing influx of foreign paupers into the United States. In presenting the petition, Mr. Davis, one of the Senators from Massachusetts, stated that hundreds of British emigrants make inquiry for the poor house as soon as they reach our shores. "In the Boston House of Industry, the money given to paupers to bribe them to emigrate has in many instances been found sewed up in their clothes. Out of 817 inmates in that establishment for the past year, 516 were foreigners.—Massachusetts alone, expends for the support of foreign paupers from fifty to seventy thousand dollars a year."

The citizens of Albany appear to be really in earnest on the subject of constructing a tunnel under the Hudson, opposite that city, as a company has already been incorporated, with a capital of $300,000, a sum believed to be amply sufficient to complete the work. Respecting the plan of operations, a late number of the Albany Argus says:—

"The intention is to introduce the coffer-dam; and to construct the work throughout with the aid. The bed of the river is first excavated with dredging machines, to the (supposed) hard pan or rock bottom. The coffer-dams are then sunk to the depth of the excavation, easily rendered impervious to water, and the water pumped out, and the inner or working part of the dam kept free, by the use of steam. The excavation is completed, and the sides and arch of the tunnel constructed with ease and without interruption. The coffer-dam is removed to the next, as each section is completed. And thus the work is pushed forward with celerity and economy, and at the time being, under the bed of the river, or rather, as at London, far under the water, excluded from light and air, but in the open air, and with all the facilities of ordinary excavation and masonry—at the requisite depth below the bed of the river, it is true, but within the coffer-dam, and protected by it from the water."

New York appears to be determined to maintain, as far as possible, the supremacy she has gained by her internal improvements. There are now, either in part completed or about commencing, the following new projects:

1. The great thoroughfare through the southern tier of counties, on the direct and shortest route from Buffalo to New York.

2. A chain of Rail Roads, the whole distance from Buffalo to Albany, parallel with the Erie Canal. A part complete from Albany to Utica.

3. The Transverse or Collateral Rail Roads which seem first to concentrate from Lake Ontario upon Utica, and thence radiating south from that point to connect with the New York and Erie and those leading into Pennsylvania.

THEATRICAL.

The engagement of the Woods and Mr. Brough has closed, and these distinguished vocalists are about to take their departure from this country. Their success in this city has been without parallel, and their performances may justly be regarded as forming a new musical era among us. They have charmed all ears with their delightful melody, and have given an impetus to musical taste, that will long continue, we trust, to exercise its influence in society generally. The Woods will sail, in a few weeks for Europe, to fulfil engagements in London and elsewhere, after which, it is probable, they will again return to the United States, perhaps to remain here permanently.

Mr. Hill is about closing a very successful engagement at the Walnut street Theatre, prior to his departure for Europe, where he goes to give John Bull a spice of Yankee quality.—Hill, in his peculiar line—that of regular "down east" characters, is without a rival in his country, and we have not a doubt but his experimental trip abroad will result in both fame and fortune.

Trade of the Susquehanna.—The following resolutions were adopted in the Select Council, on Thursday last. They had previously passed the Common Council:

Resolved, That it is of vital importance to the trade and general prosperity of the City of Philadelphia, that a canal sufficient to pass the trade of the river Susquehanna, should be constructed, if practicable, from that river to the City of Philadelphia.

Resolved, That a joint committee of three members of each Council be appointed, to inquire into the expediency of having a survey and examination made, at the expense of the city, to ascertain the practicability of constructing such a canal.

The committee are, Messrs. Price, Dunlap, and Lapiscot, of Select, and Messrs. W. F. Smith, Rowland, and Wright, of Common Council.

THE SURPLUS REVENUE & THE GOLD CURRENCY.

We understand that a bill of great moment was reported by the Committee of Foreign Relations in the House of Representatives on Friday, the 8th, being the bill to purchase the French and Neapolitan indemnities. By this bill seven millions of dollars are proposed to be appropriated to effect the purchase of these claims by the holders, and truly nothing more auspicious to the public interest could be conceived of. Three great objects will be immediately accomplished by it. 1. The Treasury will be relieved instanter of seven millions of dollars. 2. The merchantable community in the great cities, now sorely pressed by the Bank of the United States,[1] will be saved from the pressure of that institution. 3. The mint of the United States will acquire seven millions of foreign gold coin to be recoined into half and quarter eagles.—*Globe.*

THE CAMANCHES AND THEIR ALLIES.

The state of things now existing in the Mexican territory, west of the boundary of the United States, and the approbrious which are entertained by some persons that the Indians in the north of Texas may be embodied and brought down on the frontier, give value, at the present moment, to the following information, from an authentic source, concerning the Camanche Indians and their allies.—*Nat. Intel.*

Extract from a letter officially addressed.

WASHINGTON, March 11, 1836.

"For the last five years, I have had intercourse with the Camanche Indians and their allies. They inhabit the country from lat. 34 deg. north on Red River, to the Rio del Norte, extending north to the road that leads from St. Louis, (Mo.) to Santa Fe, south to the head waters of Trinity, Guadaloupe, Brassos, and Colorado rivers of Texas; a country in length 600 miles, and breadth from 250 to 400 miles, mostly prairie. The different tribes are Camanches, Kyawas, Towash, or Southern Pawnees, Caddoes, Wacoes, and Skidoes. They number about thirty-five thousand in all, and can muster from seven to eight thousand restless warriors in this great Western prairie. Five out of the Buffalo themselves, they acknowledge no superior—depredating upon the Mexicans of the interior States, ravaging and burning their towns, murdering their people, sometimes taking prisoners, which they either torture to death or make slaves of, carrying off immense herds of mules and horses. Their impunity heretofore prompts these wandering hordes to look upon themselves as the most powerful of nations, which opinion the visits of our sick and exhausted troops among them was far from removing. I left their country on the 5th of December last."

PHYSICIANS, TIME-SAVING MACHINES.

Dr. William Byrd Powell, a gentleman highly valued throughout our country—but most particularly in its southern and western portions—for his bold and original views of geology and phrenology, as well as for his general science, has been appointed Professor of Pharmacy in the Medical College at Louisiana. An introductory lecture of his is now before us; and, though brief, it is replete with evidences of the characteristic activity and energy of the author's mind, studious more of nature in untiring personal observation than through other men's eyes in books.

Among other novelties we find the following curious calculations in favour of Physicians, as time-saving machines:

"Rail-roads and steamboats are valuable to a community so far as they save the time of the productive labourer. For example—a few years since, it required ninety days for a man to get his produce from Louisville to this market and return to his family; now he can do it in thirty days. Hence it is evident that sixty days in each year have been saved to such individuals and the country.

"Now suppose one person in every twenty-five of the population of the United States to be annually sick, which would be about four hundred and eighty thousand. Suppose one-fourth of this number to be productive adults, which would be one hundred and twenty thousand; suppose, again, that the average term of sickness to be two weeks, then it is clear that one million six hundred and eighty thousand days are lost annually to the country. Now suppose that it is possible, and I have no doubt of the fact, for health to be restored to efficiency, by timely medical assistance, in one week, then there would be no less than five hundred and twenty-five thousand days saved for the purposes of labour and happiness, which otherwise must be consumed in clinical sufferings. Suppose, finally, that the present ratio of mortality is one to *every* thirty-eight or forty of the entire population, which is as near the truth as I can arrive, and that, by professional means, it is reduced to one in every fifty-six or fifty-eight, no one would then doubt the possibility of making medical science as great a labour-saving instrument as cotton-gins, spinning machines, steamboats and rail-roads. That such an achievement is within our grasp, no citizen of New Orleans can well doubt, who will reflect upon the difference that exists between the former and present mortality of the yellow fever of the city."

MURDER OF DUFFY.

Trial of Hamilton.—The following are extracts from the testimony on the trial of John Hamilton, the comedian, for the murder of William Duffy, late manager of the Albany Theatre.

Joseph Tuffs—Testified that he was acquainted with William Duffy and the prisoner—saw Duffy on the evening of the 11th February last, after the play, at the American House, and left the house in company with him, and they went to the Rising Sun Tavern, next door to the Theatre, together. Mr. Duffy had his bed room and slept in the theatre, he generally passed through the Rising Sun Tavern to go to his bed room; Duffy first entered the tavern that night, and witness followed; saw prisoner there; also Mr. Thos. Lee, Henry Chapman, Charles Furness, and Choate, the bar-keeper, and Felix Ryan, a waiter. Hamilton, Lee, and Chapman were sitting together drinking, in the corner of the room next to the bar. The room is about 16 feet long and 12 or 14 wide. When witness and Duffy first entered the room, heard prisoner say "there comes that ——— naggardly son of ——— that discharged me;" Duffy had not then said any thing to prisoner; Duffy said to prisoner, "how came you out of jail?" Duffy then approached prisoner, and prisoner rose from his chair and they clinched each other by the collars of their coats; Duffy pushed prisoner back into the corner between the mantle piece and the bar, and jammed his (prisoner's) head back against the wall three or four times; witness sprang towards them and pushed Hamilton into the bar and had him there. The scuffle lasted about a minute; witness saw that prisoner was very much aggravated and begged of him to desist; held him fast in the bar about one minute; prisoner kicked witness and tried to bite him, and to free himself from witness let him go, he rushed among the persons in the room again; a struggle then immediately took place between prisoner and Duffy and others, and in a moment Duffy sallied back into a corner of the room next to the street, witness heard some one say "take care of the dirk," witness then jumped into the middle of the room towards the door; Hamilton at that instant passed the witness and was going towards Duffy; Duffy raised a chair, and as Hamilton approached, struck him with it, but did not knock him down; witness saw the dirk in prisoner's hand as he was rushing towards Duffy, and caught hold of prisoner's arm and shoulder and threw him on the floor; witness took the dirk from prisoner, who resisted violently; (a knife was here shown witness, the knife I took was very like this; can't say this is the same; witness as soon as he had taken the knife from prisoner, looked at Duffy—saw that his hand was cut; Duffy said "I am stabbed;" witness examined Duffy, and saw that he was wounded in the abdomen; prisoner, when he found he had stabbed Duffy, said "he was glad of it—and he Duffy, could not do a *hooker* with him." Prisoner remained in the room till a constable came and took him off; Dr. Staats came and examined the wound.

Dr. Barent P. Staats testified; was called to see Duffy at one o'clock on the morning of the 11th of February, at the Rising Sun tavern; found Duffy sitting near the fire in the bar room; witness inquired what the difficulty was; Duffy replied, "Hamilton, the ——— rascal, has taken the liberty of ripping my bowels up;" witness examined the wound; the bowels protruded about as large as a hen's egg; the wound was 1½ 1½ inches long; Duffy died on the 12th March—and *he died of the wound*; the knife must have penetrated the whole length of the blade.

Hamilton was acquitted by the Jury.

Acquittal of Hamilton.—The jury came into court last evening about 9 o'clock, says the Albany Evening Journal of Saturday, with a verdict of *Acquittal* for Mr. Hamilton, who was indicted for the murder of Mr. Duffy. The verdict was received by a numerous audience with loud and reiterated bursts of applause. The music current of public opinion during this trial underwent a change. The testimony, while it could not excuse the use of a murderous weapon, was calculated to excite a strong feeling of sympathy for the accused—who, though sinning, was also "sinned against." It was an unfortunate, and in its consequence, a most afflicting occurrence. The untimely death of poor Duffy was universally lamented, but under all the circumstances, we apprehend that most persons now believe that it was the result rather of misfortune and accident than of design. At any rate, Hamilton has had a fair trial by an intelligent and impartial Jury; and should stand acquitted in the public estimation, of the high crime for which he was arraigned.

Travelling between New Orleans and N. York.—The New Orleans Bulletin states that the steam boat Washington had been purchased by Messrs. Stockton & Co. and was immediately to be put on the route from Mobile to Pensacola, as a regular packet, running from each place every other day, and connecting regularly at Pensacola with the Florida Line. Thus the traveller has an uninterrupted steam navigation from New Orleans to Cedar Bluff, thence coaches to Augusta, Georgia, thence the rail road to Charleston, and thence steam packets to New York, being only 750 miles road travel.

LATEST FROM FLORIDA.

Major General Macomb and Captain Conrad, his aid, arrived at Mobile on the 23d ult. from Pensacola, which place they reached the night before, in a United States cutter, from Tampa Bay. Dates from Tampa, through this channel, are down to the 13th Instant.

In addition to particulars, we learn that, on the 11th, General Smith, of the Louisiana volunteers, was sent, with 500 men, to Charlotte Harbour, to ascend the stream and capture all the Indian families supposed to be secreted there. Another force, consisting of about 200 mounted cavalry, was despatched to drive the Indians in that direction.

In a skirmish of the advanced guard of Capt. Shelton, that officer was wounded by an Indian Chief, whom he killed. The Chief, it is stated, had with him the scalps of a number of white persons.

On the 12th, Gen. Scott shipped off from Tampa Bay 350 Seminoles, men, women and children, forming Black Dirt and his tribe.

On the 15th, the Army in two bodies started to return on both sides of the Withlacoochee, in the hope of meeting the Indians in some force.

The prevalent opinion is, that the Indians have broken up and dispersed into small parties. Little more can be done at this season. The health of the volunteers suffers, and the climate is a dreadful one. There are 400 sick at Tampa Bay, and out of Col. Brisbane's regiment that left St. Augustine, 700 strong, not 400 are fit for duty. It is, we hear, the plan of Gen. Scott to discharge the volunteers, and send them home, and selecting the most healthy points compatible with the service, to establish posts of regulars, of whose there are about 1300, to keep the Indians in check until the season enables the army to resume operations.

[From the Mobile Mercantile Adv. April 26.]

CHEERING FROM TEXAS.

We are indebted to the New Orleans Bulletin, for a slip from that office, dated Sunday morning, April 24th, and containing the following cheering news, not unmixed however with sorrow and deep regret, that another dreadful massacre has been made of more of our brave and noble countrymen, by the Mexican bloodhounds.

By Major Horton, who came passenger in the Texian government schooner Invincible, we learn that 1200 Mexicans had crossed the Colorado, 800 men at San Felipe, and 400 at North Bend; that Gen. Houston's effective force was 2300. The Colorado had overflowed its banks, and the 1200 Mexicans cannot retreat. Houston had despatched Major Baker, with 400 men, against 400 Mexicans, and was advancing himself with his whole force upon the Mexican division, whose retreat to the main army was impossible.

The total destruction of the 1200 Mexicans is certain; all was joy and confidence at the seat of Government. The elements are fighting for Texas, and the universal opinion is, that the Mexican army between the Colorado and Brazos, is already defeated.

Houston must have fought the battle last Sunday.

DREADFUL MASSACRE.—We also learn that 73 unarmed emigrants that left this city in the William and Francis, for Cadona, and were landed at that port, trusting themselves unarmed in the power of the Mexicans, were in two hours butchered by the soldiery, in sight of the vessel; the schooner escaped to Matagorda. The Pennsylvania is expected up to-night with further information. The Brutus was to sail the day after the Invincible, with women and children.

We also learn that Dr. Harrison, son of Gen. Harrison, of North Bend, Ohio, was, while travelling with three American gentlemen, taken by the Mexicans, mutilated, his body cut down, and his bowels torn out and left in that situation before life was extinct! The wife of Dr. Harrison came passenger in the Invincible.

NAVAL ENGAGEMENT.—The Texian armed schooner Invincible, Capt. Brown, fell in with the Mexican schooner Montezuma, at anchor off the Brazos Santiago. An action immediately took place, with a running fight of several hours, which terminated in the sinking of the Montezuma, before she reached the shore, to which she was returning. When last seen, her yards were under water. She was proceeding to convey to Galveston Bay about 1000 men; the expedition is now destroyed. The Invincible was somewhat cut in her sails and rigging, but had not a man wounded. The fate of the Montezuma's crew is not known.

We gather from the N. Y. Times the following description of a great pier, which it is contemplated to erect in the North River, for the accommodation of trade, and the safety of shipping.

"The line of pier is to be in 54 feet water, about 5500 feet in length, commencing within about 600 feet from the battery, and eight or nine hundred feet from the present line of the shore, with which it is to be connected by bridges or wharves, through which the tide would ebb and flow. The pier will be from 100 to 200 feet wide, leaving ample room for ranges of stores. The water within the pier will be from 35 to 40 feet in depth. It is estimated by Mr. Strickland, the Philadelphia, the pier and stone work will cost about $4,284,000, including the bridges or wharves. The wash from the streets is to be carried beyond the outer piers, so as to prevent the filling up of the basin."

At a late meeting of the New York merchants, the Common Council were requested to obtain the necessary information as to cost, and location of the pier, and to consider whether the work should be executed by the city, or by a company incorporated for the purpose.

Bills read a third time and Passed in the Senate of New York on the 9th May, 1836.

To incorporate the New York and Baltimore steam-boat company.

To incorporate the Grand Chasy navigation company.

To amend the charter of the Sandlake and Nassau turnpike company.

To incorporate the Essex manufacturing company.

To provide for the construction of a rail-road from Brewerton bridge to Syracuse.

To provide for the construction of a rail-road from Syracuse to Utica.

To provide for the construction of a rail-road from Auburn to Rochester.

To amend and extend the act to incorporate the Harlem river canal company.

To provide for the construction of a rail-road from Skaneateles to the Auburn and Syracuse rail-road.

To provide for the construction of a rail-road from Oswego to Utica.

To provide for the construction of a rail-road from Lansingburgh to Troy.

NO WAR.

The National Intelligencer of Monday, in the way of a postscript, says:—

"After our paper was ready for press, last evening we were happy to learn that a letter had just been received in this city from an officer of the army of the highest rank, at New Orleans, stating that there was not the least danger of any hostilities on the Texian frontier, either from Indians or from the Mexican troops, and that the Governor of Louisiana concurred fully in the opinion, founded on the most recent information from the frontier. We infer from this that General Gaines has been misinformed and entirely mistaken as to the fears expressed in his letter to the Secretary of War, which we publish to day."

Emigrants.—The tide of emigration has began to pour on us this season unusually early. Already every steamboat that arrives at the landings on the Mississippi, is crowded with families seeking a home in our land. So crowded are the boats that we are credibly informed it frequently is difficult to obtain a passage.

In addition to those brought by water, there is a large number arriving every day by land. It has been remarked by many of the oldest settlers, that on no former season have they seen such a number of movers by land at so early a period. Should the flood of persons continue, we may confidently anticipate a much larger accession to our population than, than during any former year. We are glad to see them come, we yet have room to spare.—*Salt River Jour.*

Correspondence of the N. Y. Commercial Advertiser.

BUENOS AYRES, Feb. 28, 1836.

The present Governor, Don Manuel de Rosas, has improved very much on the Jackson plan of governing. I think our *old Roman Sam* might take some salutary lessons from him. I am sorry our Yankee friend, Major Jack Downing is not here; if he was, he could give the President and the kitchen cabinet some new ideas on government. Rosas is *solus*. It is true he has a house of representatives, but they can make no laws but such as the governor recommends—and whatever he does recommend, they pass unanimously. He has no factious Senate to consult. All causes tried before the courts must be sent to him for approval or rejection. This is taking the responsibility with a vengeance. He has it in his power to shoot any man in the province at his will, and no person dare gainsay him. It is true the governor has not shot a great number for political crimes, as he calls them—that is, not thinking as he does; but we expect, next week, there will be about twenty shot, those engaged in the murder of General Quiroga.

EPITOME OF THE TIMES.

The office of the Evening Star is removed to 95 Chestnut street. The publication has been resumed.

Captain Peter Fritz's National Guards, paraded last Monday, accompanied by the German band, with an effigy of the tyrant Santa Anna, which represents the monster as large as life, bound in fetters. A star for a target was placed upon his breast, as a mark for the bullets of the corps.

A Warning.—We learn that a man was killed on Sunday last on the Norristown Rail-road, about three miles from that place, in the following manner. He was riding on one of the return cars, in a state of intoxication. Strenuous efforts were made to keep him quiet, and in safety; but he kept moving about continually, against the express commands of those present, until, in a fatal moment, he fell directly under the cars, on the rail. He head was literally severed from his body by the wheels. Not the slightest blame can be attached to the excellent conductors, who are proverbial for their scrupulous care and attention. Another victim to *Rum!*

John Reynolds, Esq. of Butler county, has been appointed by the Canal Commissioners, Superintendent of the Erie Division of the Pennsylvania Canal.

Supposed Robbers Arrested.—We learn that two men, supposed to have been connected with Sanders,—the man arrested last week,—in the robbery of the Merchants' and Manufacturers Bank of Pittsburg, were arrested on Monday, and after an examination by the Mayor committed. They were recognised by several of our brokers as the persons from whom they had purchased a considerable quantity of the stolen paper.

Homicide.—An old man named Patrick Brady, had his neck broken on the 6th inst. by a fall down stairs at a house occupied by John Hart, in the rear of No. 59 Cross st. N. Y. As there were grounds for suspicion of violence, Hart and his wife were arrested, and committed for examination.

The Legislature of this State will convene on Monday next.

The Labourers on the Schuylkill, struck for wages last Monday morning. The Coal dealers still adhere to their pay of one dollar per day for ten hours, between 6 & 6, and 12½ cents per hour for extra work. This with constant employment, is great encouragement to those who wish to "make hay while the sun shines."

Appointment by the Post Master General.—Edward Lesley Sweeney, formerly merchant of this city, to be Post Master at Dansburg, Lycoming county, Pa.

Fatal Accident.—A boy living in Allegheny-town, was killed a few days ago, while on a shooting excursion in company with another lad, by the unexpected discharge of his gun, the contents of which entered the abdomen and caused death in a few hours after.—*Pittsburg Adv.*

Revenue from Canals and Rail Roads.—The Harrisburg Telegraph of Wednesday, has the following:

"Amount of Tolls received at the Treasury Office, Harrisburg, from the Collectors on the Pennsylvania Canals and Rail Roads, since the first of April last.

During the month of April,	$38,023 61
Since the first of May,	27,344 61
Total amount,	$65,368 22

The Chesapeake and Delaware Canal is now open for the passage of vessels drawing six and a half feet water.

The Pittsburg Advocate, of the 5th inst. says —"A few days ago in passing along the wharves of the Monongahela, we counted thirteen new steam-boats almost prepared for the reception of freight. Last year, if we remember rightly, there were about 40 steam-boats built in this place, of different amounts of tonnage."

We see it stated in all the papers, that the new Cardinal Cleveras will be elected Pope, as soon as his present holiness dies. Is it a settled matter, that a Cardinal shall order a Pope.

Another Soldier of the Revolution gone.—The venerable Governor Bennett, of Delaware, died on the 7th inst. in the 78th year of his age.

One of the best steamboats on Lake Erie is said to be commanded by a man of colour.

A Clean Bridge.—The bill incorporating a company to construct a bridge across the Niagara river at Lewistown, has passed both branches of the New York Legislature, and become a law.

Santa Anna threatens to conquer the United States, and escape upon the 'ice unless helping the Texians. The Russian government is helping the Texians.

It has been decided by a competent tribunal, in New Jersey, that the price of kissing a lady against her consent, is ten dollars. The *charge.*

The town of Portsmouth, N. H. has authorised the superintendent of the Town Farm under the direction of the Selectmen, to commence a nursery of white and Chinese mulberry trees upon the farm. This is worthy of imitation in other places.

The Day of Small Things.—A bill is before the legislature of Rhode Island, appointing a state printer, who is to receive twenty dollars per annum for printing the laws. All other papers are to be allowed fifteen dollars for the same service.

Passengers are taken from New York to Boston, via Providence, in 16½ hours.

The Land Bill.—The "Spy in Washington," corresponding with the New York Courier and Enquirer states that Gen. Jackson recently held a conversation with a gentleman who he! once remarked to him that Mr. Clay complained that he had not promptly returned the Land bill, with his objections to its passage. The President, no doubt highly excited, declared "that he was now prepared—he had that veto in his pocket."

In New York a man has been recommended as a candidate for office because he has a handsome wife. Right. The "better half" of a man ought always to be the test of his qualifications to serve the public.

"The town of Northampton, Mass. have voted, that beiseeforward *all* drunkards shall be *posted.*" That's right—there is no use in *waiting* all the time.

Books were opened in Richmond, last week, for subscriptions to the stock of the Richmond and Petersburg Rail road. The sum required was $150,000, and when the books were closed it was ascertained that the subscriptions amounted to $423,300.

The New Orleans papers notice the arrival there of the steamboat Pennsylvania, from Pittsburg, laden with eighty-four 32 pound cannons, for the armament of southern fortifications.

Great freshets have recently taken place on the Seneca Lake, and in Ohio. $10,000 worth of flour, wheat, and other property, was lost in Geneva, and $100,000 worth of corn near Lancaster, Ohio.

The Richmond Enquirer, whose Editor is likely to be well informed on the subject, gives it as its impression, that if the President felt himself at liberty to indulge his private feelings, he would not hesitate one moment to speak liberty to Texas, and an alliance with the *United States of America.*

The Detroit Journal says:—We learn that from 6000 to 8000 barrels of Flour have been shipped from this place to Chicago, by the several vessels which have cleared for that place within a week past. Flour is selling at that place for $10 and $12 per barrel.

A Fact.—There is a piece of ground in Chicago, which cost, in 1830, *sixty-two dollars*, which has risen in value at the rate of *one hundred per cent, per* DAY, on the original cost ever since, embracing a period of *five years and a half.* Beat this who can.

New and elegant Article of Glass-ware.—The Boston Gazette says, the New England Glass Company are now manufacturing plain fire polished dishes, a rich and beautiful article, resembling at sight polished silver—adapted for fruit, blanc mange, &c. and what is more, received the unanimous approbation of the ladies.

An itinerant writing master in the west, has been indicted for *hog stealing.*

Deduction.—It will be observed by a reference to our origin news, that from the amount of indemnity ordered to be paid the United States, one million of francs are to be deducted now, and five hundred thousand from the other payments. These fifteen hundred thousand francs are the indemnity which the United States makes the heirs of Beaumarchais—consequently the government of this country supplies the deficiency, (to that amount) to our own citizens, who have claims on the French indemnity.

A man named John Phillips, was last week sentenced by a court in Boston, to seven years confinement in the state prison. Phillips is 40 years old, and has already spent 19 years in the state prison.

Money Recovered.—We understand (says the Transcript) that the Merchants Bank of Providence, has recovered one hundred and sixty-nine thousand dollars of the money of which it was robbed a few weeks since.

Matrimony is properly called a *tender* point, for a hand is not unfrequently awarded to the largest tender.

The National Intelligencer says:—"We are happy to infer, almost certainly, from the Mexican official papers published to-day, that the whole story of the massacre of Colonel Fannin's command is, from beginning to end, a fabrication, and that Col. Fannin and his men are now prisoners of war in the Mexican territory."

It is said in one of the N. York papers that a new Hotel is to be built in that city, to which, in point of magnitude, the enormous pile of J. J. Astor will be like a mackerel schooner to a seventy four. It is said that all the houses in Broadway, from Barclay street to Park Place, with all in the rear for a proportionate distance, are to be demolished to make room for this new wonder.

On the drawing of a lottery at the South recently, two negro girls, Rebecca and Matilda, each of whom held two tickets, drew themselves respectively, and Rebecca also drew a steamboat, in which she immediately embarked for New Orleans. Matilda's second ticket drew a mare, upon which she also set off for the same place.

Col. Crockett.—The National Intelligencer gives the following as an extract of a letter from a gentleman in Louisiana, dated April 19th, to a Member of Congress:

"CROCKETT was found (within the Alamo) in an angle made by two houses, lying on his back, a frown on his brow, a smile of scorn on his lips—his knife in his hand, a dead Mexican lying across his body, and twenty-two more lying pell-mell before him in the angle."

Fortunate Voyage.—The Gazette of the 29th ult. states on the authority of a correspondent at Havana, that an offer had been made to the supercargo of the ship Timoleon of the port of Boston, for the sugars already on board his vessel, at a price which would yield the owners *twenty-five thousand dollars* profit on the cost. The Timoleon has not been away from this port, we believe, more than two months.

Recipe for killing Flies.—A German lad named Henry Mullen, living in a neighboring town to Charleston, S. C. for the purpose of cleaning the store of flies, laid a train of gunpowder on the counter, and ignited it by flashing fire from the pan of a musket. There being a keg with powder on the counter, the fire communicated to it, and an explosion took place which lifted the building from its foundation and threw it into the street, thereby killing all the flies, and tipping Mullen a Diavolo somerset!—We are happy to say, however, that after getting up and shaking himself, Mr. Mullen found that he was not materially damaged.

Col. John Nichols, a patriot of the Revolution, died at Richmond on the 29th, at an advanced age. He was buried with military honors.

A new City.—A tract of land at the junction of the Ohio and Mississippi has been purchased, and the tract of a town laid out thereon. A large hotel is to be erected in the course of the ensuing summer. It is supposed that a marine hospital will shortly be erected at the same place. The new city is to be called *Cairo.*

An importation of the raw material.—A New Orleans paper states that a cargo of small pox has been imported into that place.

The new shield to be used in the construction of the Thames Tunnel consists of 5000 pieces.

Steam Boat Burnt.—The steam boat Ohioan was destroyed by fire on Saturday last, about 8 miles below Octeese. The females escaped in the yawl. The other passengers jumped overboard. A servant girl was drowned. The boat was not insured. Loss, $25,000.

A patent frictionless pump is being exhibited in New York. These pumps are to be applied to fire engines.

The city councils of New Orleans recently granted 64,000 dollars to certain fire companies.

The Albany Daily says, 290 miles of the New York and Erie Rail-road will be put under contract this summer.

The French Government has issued a decree forbidding the exportation of arms and ammunition from France, except under special license; the object is to prevent Don Carlos from receiving his supplies from that country.

A proposition is before the Mexican government for the construction of a Rail-road from Vera Cruz to Mexico.

Rear Admiral Charles W. Wooster, of the Chilian Navy, a native of Connecticut, arrived in New York a few days since, after an absence of nineteen years from his native country.

A company at Buffalo, have recently purchased of General Peter B. Porter, the whole of his possessions at Black Rock Dam, near 400 acres, with the mansion house, harbor grounds, mills, unappropriated water power, &c. for $220,000. In one year probably, it will be worth a million.

A Convention for the promotion of Internal Improvements is now sitting in Missouri. Among other information, had before it by committees, it was stated on the part of one of them that the value of manufactures annually produced in that State from other parts of the Union, during the past year, was $2,075,000.

The fashionable world in New York, have been much excited by the elopement of Miss Emma L. the youngest daughter of a wealthy London merchant, with the young Count de Mr. P. a young gentleman from a neighbouring city, described as a perfect Adonis. They were married in New Jersey, before the incensed parent could overtake them.

There has been presented to the House of Commons this year 57 petitions for Railways, involving an estimated outlay of upwards of £28,000,000 sterling, founded on which thirty-two bills have been read a first time.

The mail is now only twelve days and a half from New Orleans to New York. Travellers can pass from Richmond to New York in 42 hours, and from Baltimore to New York in 14½ hours.

The number of French electors entitled to vote at municipal elections is 2,679,289, being about one eleventh of the population. Of these, 2,791,191 enjoy the franchise by right of their professions, independent of their wealth.

A drunkard went into a store in Salem last week and asked *for refreshment.* Having already rather more of that article than he could stand under, he was ordered off, and staggering to the door dropt a bottle of rum from under one arm and Paine's Age of Reason from the other.

The Columbia Spy of Saturday last says—"The toll received at the Collector's office, Philadelphia, for the month of April, amounted $90,358 52. At the office in this place, it amounted to about $19,000—making at the two offices near $40,000 for a single month. This large sum will no doubt cause some of our readers to open their eyes, but the truth is the public works of the state are only beginning to realize the expectations of the friends of the improvement system."

Pompeii.—A rich discovery was made at Pompeii in January last, in the street of Mercury.—The exterior is not remarkable, though it has some paintings of Narcissus and Endymion; the house contained four vases of silver, and a great quantity of medals, among which were twenty nine pieces of gold, of the first Roman Emperor. Two vases of silver, of five inches diameter, ornamented with reliefs of Cupids and Centaurs, and emblems of Bacchus and Ceres, have also been found.

Amoskeag Factory Girls.—An attempt was recently made to reduce the wages of the girls at the Amesbury mills, whereupon they "turned out," and all, but two, left the mills. They then proceeded to the Baptist church, chose a president, passed resolutions, and bound themselves under a penalty of five dollars, not to go back until the old prices were restored. The proprietors at last consented to receive back all but five or six ringleaders, but no, the girls were not going to abandon their most efficient companions, and nobly stood out; their employers were willing to include all in the act of amnesty.

Apalachicola.—A letter dated the 21st ult. says:—"The public sales of our city lots for three days are three hundred and eighty-two thousand dollars, making together, with the amount of lots at private sale, upwards of half a million of dollars for less than one half of the city. The remainder will probably sell for as much more. The greater part of the Columbus merchants have made extensive purchases."

Arrest for Debt.—Within the last three years 70,000 persons have been arrested in the city of London for debt, the law expenses of which exceeded two millions of dollars.

Smoking.—Such is said to be the passion for smoking among the lower class of females in French prisons, that they make pipes of bread, in which they smoke snuff, tobacco being prohibited.

The monstrous practice of selling a woman took place at Chinnock during the past week. A man actually led forth and sold the one he had solemnly promised to "love, and to cherish, and worship," for sixpence and a quarter of cider, with a new halter round her neck, which cost 5d.!—*Sherborne Journal.*

A GOOD 'UN!—A student of anatomy, uneasy for his *chance of being "corked"* in an approach ing "*quiz*," thus delivered himself: "We have had *adipose matter* enough in *lecture*, but Prof. ——— will "*ad-ho-pose*" * matter, my unreadiness to the contrary, notwithstanding.

* Add his powers, or "*pose matter.*"

The actual surplus revenue of Great Britain and Ireland, beyond the actual expenditure, for the year ending January 5th, 1836, was $1,620,040 pounds, 4 shillings, and 11 pence.

At a meeting of the British Entomological Society on the 4th of April a paper was read, developing a plan for keeping flies out of houses. The means adopted are simply a net of different colored thread, the meshes three quarters of an inch square, which is hung before the window. The flies, it seems, from the magnifying power of their vision, are stupid enough to suppose that this net presents an absolute bar to their entrance, and therefore do not make the attempt.

A letter from Saragossa of the 26th, gives an account of the violent proceedings of a part of the National Guards of the place, which brought about the revision of the sentence of transportation pronounced against four Carlist prisoners, and that of death issued against them.

Letters from Vienna received in Paris, spoke of the recall to St. Petersburgh of the Russian Ambassador, M. De Tatischeff, on account, it was supposed, either of its being suspected that he had some share in the publication of certain documents which have appeared in the *Portfolio* or of his having figured in some one of them in a way which has occasioned the displeasure of the Russian Emperor.

Twenty-seven thousand one hundred and fifty slaves have been emancipated since 1830 in the four French colonies of Martinique, Guadaloupe, French Guiana, and Bourbon.

The Council of Geneva have abolished the old custom of locking the gates at night-fall—a measure which will be rejoiced at by travellers.

The Jane of Hull, and the Viewforth, two of the missing whalers, have arrived in England. The latter vessel had fourteen of her crew, who perished one after another, under the most severe privations and sufferings.

A member of law and medical students have been arrested in Paris, charged with being engaged in a conspiracy against the government. They had established a clandestine manufactory of gunpowder, and some of them were engaged in the process when taken.

The government of Cuba are making an attempt to introduce the culture of silk into that island. It is thought they will succeed.

A woman lately died in Italy aged 142 years.—She had been blessed with eight husbands, the last of whom survived her.

Rather Tough.—Flocks of wild pigeons have recently visited Coburg and Hamilton, in Upper Canada.—A number of them which had been killed, were found, according to the editor of the Montreal Herald to contain masses of ice in their crops.

The Mother of Kings.—Of the eight children of Madame Letitia Bonaparte, seven have worn diadems.

The King of Prussia is labouring under insanity or madness.

A long brief.—The Dublin Post says, that the brief in O'Connell's case, for the Dublin election committee, consists of 22 reams of paper, or 11,000 sheets.

Horrible murder.—When they do undertake to do the horrible in the demoralized communities of the old world, they go entirely ahead of anything in this country. We cannot compete with them in the art of atrocity. A woman lately, in Brussels, killed her own child. After she had strangled it, she cut off its head and threw it into the fire,

Philadelphia Prices Current.

FRIDAY MORNING, MAY 13, 1836.

Prepared for the Saturday Evening Post, by Robt. T. Rich, Sec'y, publisher of the Reporter, Commercial Register, and Prices Current.

JOHNSON'S SATURDAY EVENING POST.

PHILADELPHIA.

Saturday, May 14, 1836.

A plan has been submitted to our City Councils, for constructing a tunnel under the river Schuylkill, to admit of the passage of vehicles and travellers. The project is said to be entirely feasible, at a reasonable cost.

The Legislature of this State, agreeably to adjournment, will re-assemble in Harrisburg, on Monday next. The principal object of the extra session is to make an apportionment of representatives, according to the last census.

MAP OF TEXAS.

Mr. H. S. Tanner has just published an elegant whole sheet coloured Map of Texas, recently corrected by Gen. Austin. This section of our continent is rapidly increasing in interest, and should be better known by American citizens. For correctness and neatness in the manufacture of Maps, *Mr. Tanner's* reputation is established.

The market-houses in High street, between Third and Eighth streets, are about to be torn down and remodelled, in order to make room for a rail-road track, extending from Broad down Market to Third, down Third to Dock, and along Dock street to the river.—During the rebuilding of the market-houses, the stalls and others occupying stalls, will be placed on Fourth, Fifth, Sixth, Seventh, Eighth and Ninth streets, from Arch to Chesnut.

We have received from Mr. FRANCIS MASON, 215 Chesnut street, a very handsome specimen of the latest fashions, beautifully coloured, and arranged as to exhibit the various styles now in vogue in the fashionable world. The group comprises twelve figures, each of a distinct character, and the different costumes afford an ample variety for those who desire to keep pace with the outward man, according to the newest fashions. Mr. Mahan, we presume, will be very happy to receive orders from his friends.

The fourth and last concert of the season, by the Philadelphia Sacred Music Society, took place at the Musical Fund Hall, on Thursday evening, and was attended by a very large and highly respectable audience. The performances, on the whole, were judiciously selected, and well executed, affording to the audience a very high degree of intellectual gratification. The air, "When the Wreath of Joy," arranged by Mr. Bochsa, from a selected from Bellini's Opera of La Sonnambula," was sung in admirable style, as were the chorusses generally, and particularly those by a young lady from Cincinnati, who, passing through the city, volunteered her services on the occasion. She appears to possess musical talents of a very high order, and can scarcely fail of becoming eminent in the profession she has chosen.

ZOOLOGICAL INSTITUTE.

The Zoological exhibition now open in Chesnut street near Ninth, is one of great interest, and attracts daily hundreds and even thousands of visitors. It is undoubtedly the finest collection of animals that we have ever had in this city. The persons in attendance are civil and obliging, and all who visit the concern are delighted. The interest of the exhibition is greatly enhanced by the wonderful performances of the animals, whose training appears to have been brought as near perfection as it possibly can be. The juvenile portion of the audience are invariably delighted with the curious antics of the monkey, while in the more sober movements of the sagacious elephant, those of adult minds find ample food for profitable reflection. The payment of an extra shilling entitles the visitor to an entrance in another apartment, where the feats without hands or arms, exhibits great skill in managing his feet and toes. With the exception of a few trifling blemishes, the collection is in good condition, and the keepers are all civil and attentive. He also uses, with great ease, a bow and arrow, and concludes his performance by a very respectable accompaniment on a bass violin, the bow of which he holds between the first and second toe of his right foot. The exhibition will close, we understand, on the 20th inst.

TRAVELLING TO THE WESTWARD.

We are frequently called on for information as to the cheapest and most agreeable mode of travelling to the west, that we have been induced to give a more public opinion than we have recently done, based on personal experience, for the benefit of those whom it may concern.

We unhesitatingly pronounce the *Pioneer Line* and *Rail Road Line*, one of the most pleasant systems of reaching Pittsburg from this place. The journey is accomplished without fatigue, or with less annoyance than in any other that we know of. We have never heard of "complaints from travellers," of detainment, over crowded boats, and other nuisances, such as have graced our newspapers from other lines. The captains of the boats are invariably agreeable and obliging, the tables of a superior quality, and the company respectable, no one being admitted, so far as we have seen, but such as usually occupied in the passage by the boats at other days. The fare $12, to which has been added three to four dollars for table extras, at this season of the year travelling by water is delightful. The scenery along the banks of the Susquehanna, the Juniata, the Conococheague, and the Alleghany rivers, is sufficiently beautiful and romantic to entice travellers from no other object in view than the pleasure of locomotion.

NEW PUBLICATIONS.

Carey, Lea & Blanchard have just published, in two volumes, a work entitled "Nimrod's Hunting Tours, interspersed with characteristic anecdotes, sayings and doings of sporting men, including notices of the principal crack riders of England; with analytical contents and general index of names; to which are added Nimrod's Letters on Riding to Hounds." For those who delight in the chase and other sporting exercises, this is a very valuable work. The authority is indisputable, and the information on the various matters connected with the chase, is ample and full. Although written for the meridian of England, the volumes contain many reflections and anecdotes that cannot fail to prove deeply interesting to sporting men in this country.

The same publishers have just issued, also in two volumes, a new novel entitled *Harry Coverley*, by the author of "Cecil Hyde." Coverley, is a spirited and agreeable production, and will no doubt prove popular with the novel-reading community.

We learn, from the National Gazette, that Carey, Lea & Blanchard have received and put to press, *Baron Von Raumer's England* in 1835, which they will soon present to the public, with a preface written by the translator, *Mrs. Austin*, for this American edition. The extracts from the work which have been furnished in the English papers, are fitted to give a high opinion of it. The short biography of this distinguished historian, from the Encyclopædia Americana, will be appended to this edition.

The Harpers, of New York, have just published Nos. 20 and 21 of their Classical Family Library, containing Ovid's Metamorphoses and Epistles, translated by Dryden, Pope, Congreve, Addison, and others. This edition contains all the best works of Ovid, and it will prove a rich treat to the classic reader. The Classical Library is rapidly becoming a literary treasure of no ordinary character. It also embraces eleven celebrated productions of the ancient writers, and the Iliad and Odyssey of Homer, are about to be added. The terms of the library are very reasonable.

The Harpers are about to publish a new work from the pen of Lieutenant Sidell, of the Navy, author of "A Year in Spain," entitled Spain Revisited.

We have been favored with a copy of a "Memoir of Thomas C. James, M. D. one of the Vice Presidents of the Historical Society of Pennsylvania, read at an annual meeting of the Society, on the 1st of Feb. 1836." By Job R. Tyson. It is an able and eloquent production, and pays no more than a just tribute to the memory of a worthy, useful and eminent citizen.

ATKINSON'S CASKET for May, just published, is embellished with a handsomely coloured engraving of the Latest Fashions, and with two views of the splendid scenery in the vicinity of the Columbia Rail-road Bridge over the Schuylkill, at Peter's Island. The contents embrace a great variety of tales, stories, sketches, articles of poetry, literary notices, &c. original and selected, to which is appended the beautiful ballad, "Oh Mary do not say farewell!" set to music, and arranged for the piano forte. The number altogether, is unusually interesting, and to the votaries of fashion, and the lovers of agreeable light reading, it will be quite an acceptable treat.

BEAUTIFUL WORK FOR THE CENTRE TABLE.—Carey Lea & Blanchard, have just published a third edition, bound in Embossed morocco, with gilt edges, of the Language of Flowers, with illustrative poetry: to which is now added, The Calendar of Flowers, reduced by the Editor of "Forget Me Not." So completely has this edition been modified, that it may almost be considered a new work. The translation has undergone a complete revision, and in many places new explanations are submitted, and throughout are interspersed gems of poetry illustrative of the text. The whole is embellished with new plates, engraved and coloured expressly for this edition.

Mr. John S. Littell's "Law Library" for May, was duly issued at the regular period, and the number contains the conclusion of Ross's able "Treatise on the Law of Purchases and Vendors" and a large part of "A Treatise on the Rules of the Law of Personal Succession," &c. &c. By David Robertson, Esq. We heartily concur in the opinion expressed by Judge Sergeant, of the Supreme Court, that the "plan of the Law Library is such as to recommend it to the support of the profession in the United States." It is calculated to enlarge the science of Jurisprudence, and to elevate the character of the profession.

MR. LITTELL'S OFFICE is at No. 11 George street, where subscriptions are received.

The 8th number of the republication of Marryatt's novel, containing Japhet in Search of his father, fully equals any of the preceding numbers in the beauty of its dress, and typographical neatness. This number concludes the series, which is one of the cheapest editions of the works of Marryatt, that can be submitted to the public. The enterprising publisher has announced his intention of following up the plan by a republication of the admired and popular works of Bulwer, and we feel confident from a knowledge of how truly he has fulfilled his previous engagements—that his Bulwer novels will be superior in neatness and less costly than any that have yet been issued. From his advertisement, to be found in another column, it will be seen that the standard works of some of our eminent writers will follow Bulwer.

COMMUNICATION.

THE MURDER OF MISS M'CREA.

The interesting and tragical event which occurred at an early period of our revolutionary struggle, has never been more vividly and perhaps faithfully portrayed, than in the painting now exhibiting at the Museum Hall. This splendid picture comprises the entire transaction, with all the pathos and energy peculiar to the scene, and stands forth to the world as an unrivaled effort of the pencil, guided by a genius of the first order, in presenting an event which could only have been surpassed by the reality.

The artist has blended in this painting, the principal excellence of three of our most distinguished, and I may say immortal schools, viz. the Roman, Venetian and Flemish, the correctness, and chastity of the drawing of Raphael, the warmth and tenderness of Titian, and the majesty and boldness of coloring of Rembrandt—these combined excellences, are blended with a master's hand. Who unmoved can look on the victim to feel an tender—the chastity of the outline, the fascinating boldness of the ill fated girl—lovely and doubly interesting in the stillness of death—none, who have human feeling. This object is forcibly contrasted by the savage ferocity and ruthless countenance of her murderer, holding in one hand the fatal knife and in the other her bleeding scalp, displaying at the same moment a countenance, in which are blended all he feeling we would attribute to a demon. The figures and countenances of the remaining Indians are equally true to nature, they stand out in bold relief, independent of each other, each countenance presenting feeling peculiar to the individuals represented with truth, even to the vacant terror of the youthful savage. The figure of Miss M'Crea's female friend, is also entitled to peculiar commendation—the expressive agonize of horror, commanding the feeling to her convulsed muscles, the exquisite beauty and grace of the uplifted hand and arm, the transparency and simple folds of the drapery, form a combined picture in itself. The whole presenting a master piece, worthy in my opinion of competition with the most distinguished masters of the eighteenth century.

We may congratulate ourselves on possessing an artist of such rare talents—such should ever be encouraged and rewarded, they tend to refine our taste and diffuse a general affection for the fine arts, at the same time it keeps at a due distance all contemptible pretenders with which it has been our fate to be inundated in the fine arts, as well as in literature. Barbers, valets and demagogues in writing, and mechanics of the lowest grade employed in portraying in Futuria, Birmingham ware, &c. with consummate effrontery present themselves to us as artists, and pretend to decry all those first principles which form the data on which the most glorious efforts of the pencil have been based. CATO No. 1.

MEADVILLE, Pa. April 26.

Filial Affection.—We have been informed that a young lady, about eighteen years of age, dressed in man's apparel, passed through this place a week or two since. She had travelled on foot from Vermont to Newcastle, in Mercer county. Her object was to visit an uncle in Pittsburg, who was formerly wealthy, to obtain assistance for her aged father, who had been in easy circumstances, but owing to the kindness of his heart in bailing a friend, is now confined in jail.—When the lady arrived at Newcastle, she was informed that her uncle had become nearly as poor as her father, and was utterly unable to render him any assistance. Disappointed and discouraged, she turned homeward. Her purse being exhausted, a rapacious landlord between this place and Newcastle, seized part of her clothing as pay for a night's lodging. While here she put up at the hotel of Mr. J. E. Smith, whose family discovering her sex, kindly furnished her with other clothing, as well as the means of prosecuting her journey home.

Such an example of filial affection is seldom exhibited. A delicate young female, well educated and possessing all the acquirements that would render her an ornament to society, performing on foot, in the dead of winter, a journey of about 600 miles, animated by the bare hope of liberating a father from prison, could not be too much admired.

CORRESPONDENCE OF THE S. E. POST.

WASHINGTON, D. C. May 12th.

In the Senate on MONDAY, Mr. Davis of Massachusetts, presented certain resolutions of the Legislature of that State, instructing their Senators, and requesting their Representatives, to use their endeavours to obtain some aid from Congress, to prevent the introduction of paupers from foreign countries into this. Mr. Davis made some very impressive and interesting remarks on the subject,—he stated that out of 567 paupers in the city of Boston, it was ascertained that 516 were foreigners! That he was informed that in New York, there was a like proportion. He stated that these paupers were in general the very scum of the lowest class in England; that the demoralizing and pernicious effects of these people thus intermixed with our own poor, were most deplorable. That they openly laughed at those of the poor who were willing to work, and of course the industrious of our own land were discontented, to be obliged to contribute to the support of the lazy of other countries, as Mr. Davis mentioned that there was now a proposition before the British Parliament, to ship off the vicious and worst of their pauper to some part of this continent. Mr. Davis concluded his remarks by hoping that Congress would turn its attention to this important subject.

Among other propositions, Mr. Wright, submitted an amendment to an amendment submitted by him some days since, so as to provide that whenever the money in the Treasury amounted to seven millions and upwards, it shall be the duty of the Secretary of the Treasury, to invest the surplus in stock of the States of this Union, bearing an interest of——per cent. Little else was done this day, but to offer amendments and resolutions, and call the yeas and nays.

On TUESDAY, a message was received from the House, communicating the death of the Hon. Richard J. Manning, Representative from South Carolina. Mr. Preston rose, and for one of the nearest eulogies ever pronounced in that chamber, moved that members should go into mourning, by wearing black crape on the left arm for the space of thirty days—after passing this resolution, the Senate adjourned without doing any business. Several of the members are sick, but none I believe dangerously so. Mr. Moore has not yet recovered, and Col. May of Illinois, is confined to his room with pleurisy.

TUESDAY, at ten o'clock, according to previous resolution, members of the House assembled after their holiday. After reading the journal, Mr. Parker addressed the House, and communicated the melancholy information of the death of his colleague the Hon. R. J. Manning. The House agreed as usual to wear mourning for thirty days, and adjourned without doing any business.

On WEDNESDAY, the House resumed the consideration of a resolution reported on Friday last, by Mr. Sheard, directing that the committee on the Public Buildings should cause Pennsylvania Avenue, to be scraped and swept, and the dust removed; and the avenue watered during the remainder of the session! Mr Parker opposed the resolution, for several reasons; he did not think Congress had the right to expend the public monies for such a purpose, that it would be of little use, and that if the Avenue being McAdamized was a nuisance, he wondered gentlemen wished to carry it on to Georgetown. Mr. Boulden spoke in favour of the resolution; the dust was a dreadful nuisance, and could be felt by a large number of the members of the House. Mr. Harden said he had made a measurement of the Avenue, and an estimate of the expense, it would cost an hundred dollars per day to water it, and would probably cost much more than it should do, and had been made of sot stone, when there was plenty of good hard metal in the neighbourhood. If he voted for anything, it should be to put a coat of good hard metal over the whole, which would prevent the dust effectually. Mr. Briggs made some remarks on the economy of gentlemen in making speeches, that cost the nation more than the expense of watering &c. &c. The resolution was laid on the table. The Speaker laid before the House, a letter from the Secretary of State, transmitting a statement of the names, places, salaries, &c. of the several clerks employed in his Department, which with similar communications received before from other Departments, was referred to the committee of Ways & Means, and ordered to be printed. After various petitions, &c., the Army Appropriation was taken up. Two motions on amendments were pending, and Mr. McComas was entitled to the floor. Mr. Cambreleng rose and stated his wish, to say a few words in information, and said that in consequence of the heavy drafts from the South, and the intelligence received from thence, it became absolutely necessary to pass or act on this bill, as promptly as possible. With that view, after Mr. McComas should conclude, he should withdraw his amendment and leave what had to propose until the fortification bill should be taken up. Mr. McComas instantly waived his right, to address the committee, and Mr. Cambreleng withdrew his amendment. The amendment of Mr. Mercer was negatived without a count, and the bill, free from incumbrances, was taken up by sections. One or two amendments were agreed to, all the sections were agreed to, and the bill was laid aside to be called up in the House.

The Naval Service bill was then taken up. The bill as originally passed in the House, had been returned with amendments from the Senate. It was on these amendments the committee were now debating. Some of the amendments were concurred in and some others not, it was delayed till one by one of the members dropped off, and no quorum was present. After counting and calling some time, it appeared fewer names were on the roll at every call, and lest the Speaker and clerks should find themselves alone, the House adjourned.

In the Senate on Wednesday, nothing of interest took place, except that Mr Benton from the committee on Military Affairs, reported a bill without amendments to authorize the President to accept the services of volunteers for the defence of frontiers, and said that as the present crisis in the country, he felt it his duty to move that the Senate proceed to the consideration of the bill. Mr. Ewing of Ohio, opposed the motion, on the ground, that this was the day for the final disposition of the Land Bill. Messrs. Linn, Preston, Clay, Benton, Porter, Buchanan, and Clayton made remarks upon the subject, and finally Mr. Benton's motion was rejected. The bill was postponed for a limited time, the proceeds of the sales of the Public Lands among the States, and to grant land to certain States, was taken up, and opposed by Messrs. Wright and Fenton, after which the question was taken, "Shall this bill pass?" and decided in the affirmative, Yeas 25, and Nays 20. The Senate then adjourned.

In the House on Thursday, after some petitions from several quarters, Mr. Cambreleng adverted to the necessity of acting speedily on the Naval Appropriation. This ordinary appropriation bill usually passed in the month of January, and the Naval Service was now suffering from the delay in its passage. He requested the consent of the House to go into committee on this necessary measure. Mr. Graves convinced to waste half an hour by objecting and calling for a count.

The House, on motion of Mr. Cambreleng, went into committee of the whole, and resumed the consideration of the last amendment of the Senate to the Naval Service bill, and the amendment of the naval committee to the same. The resolution was for the purpose of sending out an expedition, to explore the Pacific Ocean, and the South Seas, and to authorize the President to prepare and send out for that purpose a sloop of war, and such smaller vessels as were necessary, and proper to render the expedition efficient and useful. It furthermore ordered that no money of the appropriations for the support of the navy, and of the means and facilities, under the cost of the navy department, as may be deemed necessary and proper for that object, should be appropriated thereunto, and the additional sum of 150,000 dollars, was to be given as a sort of contingent fund. The question pending was the following amendment offered by Mr. Jarvis, from the committee on Naval Affairs. It was to substitute a resolution embracing all the points of the other, but distinctly limiting the amount to be expended. The committee accepted the amendment and rose and reported the bill. The House concurred with the committee of the whole, in their disagreement to the amendment of the Senate, appropriating $130,000 for a dry dock at Brooklyn, N. Y. The House concurred with the committee of the whole in their action, except in regard to that on the South Sea expedition.—Messrs. Warner and Jarvis made some remarks upon the subject, neither of them opposed the main object of the bill, but one of them disliked giving to the President the responsibility, or in other words the power, with which the Hon. Gentlemen thought this bill would invest him. Mr. Hawes said, he might as well say out his say now as at any other time, to permit a certain gentleman to deliver lectures to the representatives of the people, upon the subject of a South Sea expedition. He was opposed to granting the privilege to that gentleman or any body else, because he is fully aware of the fact that the object of it was to operate upon that House and the other branch of Congress. He knew that a proposition would be brought before Congress, to expend a large sum of money to further this gentleman's object. It appeared to him that they had arrived at a time that, no matter what chimerical opinions were taken up by any gentleman, if the world only got an opportunity to address the representatives of the people, they would enter into all his speculations, said as they might be. It was true that they had in the Treasury a vast amount of money, and it was their duty to husband it from the hands of the people of the United States, and he was not willing that it should be cut ended in every chimerical and hare-brained notion, that entered the head of any individual. He remembered the time, when his friend from Massachusetts, (Mr. Adams) in one of his messages to the Congress of the United States, spoke of establishing a "light house in the sky." That message went to the West, and he would now tell the gentleman, that if it had not been for that notion, that he would have received the votes of the Western States for a second term of the presidency. That notion played directly into the hands of his opponents, and they hooted upon it, to use a homely phrase, like a duck on a June Bug, and thousands and thousands of votes were lost to the gentleman on that ground alone. They had argued that there was a gentleman, a President of the United States, who was not content to go to Heaven by faith, but wanted to build a ladder! I cannot give all the gentleman's remarks, he proceeded some time in the same style, and I can only say that the mantle of Crockett has fallen upon him, even as the mantle of Elijah fell upon his successor. Mr. Patton opposed the resolution, on the ground of the impropriety of shifting the responsibility of expending so large a sum, from themselves to the President. Mr. Vinton spoke in favor of the resolution, and said we had four hundred ships engaged in the fisheries there, who were almost unknown to the rest of the world, that of late, were necessary to the success and security of our commerce, that we ought to contribute our mite towards the advance of science, as he believed we had done less than any other portion of the globe. A large number of the members spoke upon the subject till the call for the orders of the day, which was the bill for the relief of the District of Columbia. A long but not interesting debate ensued, till at a late hour the committee rose, reported the bill to the House, and adjourned.

We have had one or two celebrations of the first of May, which were attended by many of the members and strangers yet left in the city. I understand that no disposition is exhibited to expedite the business before Congress, by making short speeches, on the contrary every one seems determined to speak every opportunity.

In Senate on Thursday, Messrs. Clay and Walker got together by the ears, as Mr. Hawes would say, in which they joined gallantly, and much to the admiration of the spectators. The new knight this time held his own and shivered his lance fairly without losing even a stirrup. Without metaphor, he replied to Mr. Clay's sarcasm in so dignified and candid a style, as elicited admiration from every body. The debate was about the tariff and land bill; I did not hear the first of it, but believe it arose on a resolution to place all unpaid items under the same duty, as that of Russia. An amendment to the Appropriation Bill was then taken up. It proposed to furnish Senators with a compilation of documents respecting land titles.—Mr. Benton ridiculed it in the keenest manner. He said among other things, that in his office were about 500 vols. of documents, which he apprehended, cost the government above 1000 dollars. He answered to Mr. Webster, that he had no objection to the lumber rooms of the capital being cleared of the rubbish, as it has been paid for, but he had a great objection to giving them to Members of Congress, they would have to appropriate funds to pay for transporting their presents, as no man in his senses would be willing to pay the expense of taking such useless lumber home. He advised them to be given to whoever would take them away. He spoke of the immense loss of useless documents printed during the panic session, and said that every grocer in the city was supplied with the printed documents, for wrapping up their goods. Mr. Hill agreed with Mr. Benton, and said there were five heavy vols. which were not worth for any books use the trouble of carrying them away.—Some gentlemen read extracts at random from the vols. and said there never was a greater imposition practiced, than in the publication of this work.

Mr. Walker made a very rational proposal on the subject; he said that though there was much useless matter in them, that there was also much information, that in the select committee he could not have got along without referring to some of the documents contained in them, he proposed that they should be distributed among the Senators, not to be taken away, but to be handed over to their successors on leaving it. I must plead my former reason for not giving more of this amusing debate, viz want of room.

Every body should procure and read this debate, and see how the public money has been wasted, to enrich and set up sycophants, and keep watch that those who now condemn such profusions do not themselves waste it, to feed the vanity or gratify the avarice of a new set. Remember the table of the fox and the flies.

In the House on Friday, Mr. Cambreleng from the Committee of Ways and Means, reported a bill for appropriating $1,000,000, for the defence of the western frontier. Mr. C. also sent to the clerk's table a communication from the Secretary of War, to show the necessity of disposing of this bill as soon as could be done. After some debate on this and other subjects, the House resumed the consideration of the bill for the relief of the District of Columbia. Mr. Sheard advocated the bill, and Mr. Warden opposed it. Many members spoke upon the subject, Mr. Johnson, of Tennessee remarked that as there were sixty members absent, he thought that it had better be postponed till their return, or to adjourn, but the House, hopeless of seeing all assembled again during this session, refused. On motion of Mr. Mann, the question was put, and decided in the affirmative, so the bill was passed. Mr. Jarvis rose, and said that they had been in session seven hours, had voted away a million and a half of money, and he thought they had better go home, but gave way, to hear a communication from the President, and two communications from the Secretary of the Treasury. After they were read, Mr. Jarvis renewed his motion, and the House adjourned.

In the Senate on Friday, little of importance to the nation at large was transacted, some remarks were made on the report of the Secretary of the Treasury, and some Executive business with closed doors.

In the House the appropriation bill was still under consideration. It is utterly impossible to give any thing like a regular detail in a letter, of the hundred amendments, motions, &c. that are crowding each other daily, through the hall of Congress, or what is meant and sometimes, by many of them. It would, according to the good old saying, puzzle a Philadelphia lawyer, to explain the movements of the members, one half the time they dont know themselves.

On Thursday, the horse races commence, and many of the gentlemen are thinking of them more than of the business of the nation.

In the House on Thursday, the Public Land bill was taken up, Mr. Williams of Kentucky had the floor, and addressed the House for some time. Mr. Boon then spoke upon the subject a some length; several other gentlemen made remarks upon the subject. The Naval Service bill was taken up, and talked about, the Army appropriation bill was ditto, some amendments were concurred in, then by unanimous consent the House took up the bill to authorize some company to build a bridge on the bank of the United States near Harper's Ferry. The bill was read a second time, and ordered for a third reading to-morrow. On Thursday most of the strangers and many of the members went out to the races, so that gave them that much business was done in the House. The Senate also went out for quorum and to the hippodrome of the spectacle; it was very gay, a large number of horses contended for the purse, a large number of ladies—contended for the beaux, for what I know and a large number of people of the same sex and gender, contended for both. The constituents of the Hon. Mr. Hawes would have highly gratified to see what a dash their representative cut. Mounted on a singular sort of imp, he gallopped round the field, hallooing and bellow. "Oh what a beau my granny was!" I have not time to add more at present.

NEW BRIGHTON AND BEAVER *Town Lots, for sale.*

NEW BRIGHTON is one of the most flourishing towns, west of the Allegheny mountains. It is situated on the Falls of Beaver River, about four miles from its junction with Ohio, at the most northern navigable point, nearest approach to Lake Erie—28 miles from Pittsburg. The Water Power at these Falls is prodigious, sufficient to work 1,000 run of stones, and can be cheaply applied. From the advantages of coal, climate, water and internal improvements, combined or rapidly progressing, it must inevitably soon become one of the greatest manufacturing places in the United States—already about 20 manufactories are established, and arrangements are making for increasing them.

The town of New Brighton is located on a beautiful plan, rising in terraces from the water, and is in every respect a delightful place of residence.

The canal from the Ohio to Erie, which is completed 26 miles, and the remainder to be speedily finished, passes through the town. The Mahoning, or Crose Cut Canal, now progressing, forms a junction with this at Newcastle, and connects the great Ohio Canal which empties into Lake Erie at Cleaveland. The Sandy and Beaver Canal, and the continuation of Pennsylvania Canal from Pittsburg will also form a junction with this canal at the mouth of Big Beaver.

Rail roads from the mouth of Big Beaver to Cambridge, on Cleaveland to Ashtabula to Erie, and from Beaver to Lake Erie, and to Pittsburg, have been authorized by laws, and a connection with the great western New York rail road is projected, all forming a grand combination of internal improvements, centering in one point, (at this place) will specially give to it commercial as well as manufacturing advantages, not known in any other section of country. Merchants, Builders and Manufacturers are wanted, and will find it a most advantageous location.

It is believed up well informed persons, that New York and Philadelphia, will contend at this central point, for the great and rapidly increasing trade of the Western States, that this is the nearest and best point for New York business to reach the Ohio—and citizens of New York have purchased largely with that view.

The grain from a part of Ohio and west Pennsylvania will be brought to Beaver Falls to be floured, and for a market either to Philadelphia, to New Orleans, or to the lakes. An immense coal trade to supply the towns on the Ohio, the Mississippi, and on the waters of the Lakes, will find in the Beaver Valley the nearest of its supplies—and all other products will diverge from this focus to all the points of the compass.

The extraordinary advantages which centre here may be summed, by consulting the maps, internal improvements by legislative enactments, the mass-facturing power, or the inexhaustible deposits of bituminous coal, the rich soil of the surrounding country, and the man-tals under the soil.

The prices of lots and land is at present moderate, but they are increasing rapidly—equal to any city wanted to develope the advantages of the location and the establishment of a Branch of the United States Bank which seems to take place, will remedy the evil heretofore felt.

Letters from a distance (post paid) addressed to M. T. GOULD, Agent, New Brighton, (Pallston Post office) Beaver County, Pa. or to the undersigned, will be attended to. SAML. C. ATKINSON.

Office Saturday Evening Post, 36 Carter's Alley, Philadelphia.

Saving Fund Society.—The Northern Liberty, Kensington and Spring Garden Saving Fund Society, receives deposits on Mondays and Thursdays, from 3 o'clock P. M. until 6, at their office, No. 79 North Third, below Green street.

MARRIAGES.

On the 4th inst. by Bishop Kendrick, Mr. Samuel Foster, to Miss Ann Quay, both of this city.

On the 5th inst. by the Rev. John A. Clark, Alfred Wagstaff, M. D. of New York, to Sarah Ann, daughter of Paul Beck, Esq.

On Thursday evening, May 5th, by the Rev. James J. Woolsey, Mr. A. R. Dah ven, to Miss Elizabeth Fyott, all of this city.

By the Rev. Joseph Rusling, on the 25th April, Mr. Nathaniel Bayne, to Miss Sarah Jones.

By the same, on the 28th April, Mr. Thompson Simpson, to Miss Susan Anderson.

By the same, on May 5th, Mr. William Coward, to Miss Sarah McIntosh, all of this city.

On Tuesday, 3d inst. at Friends' meeting, Thomas Cock, M. D. of New York, to Maria Margaretta, daughter of William Rybe, of this city.

On the 1st inst. by the Rev. J. W. Richards, Mr. Joseph Lokenbill, of Philadelphia, to Mrs. Anna Britton, of Germantown.

On the 26th ult. by the Rev. B. Kelley, Mr. William Smith, of Philadelphia, to Miss Frances L. Bingham, of Germantown.

On the 1st inst. by the Rev. Thos. G. Allen, Mr. James Clark, to Miss Anstead Palm.

On Thursday evening, by the Rev. Thos G. Allen, Mr. David S. Pail, to Miss Rebecca S. Hillman.

On Sunday evening, the 8th inst. by the Rev. Jos. Rusling, Captain Isaac Robinson, of Gloucester co. New Jersey, to the amiable and accomplished Miss Mary Elizabeth Rodach, of the N. Liberties.

On the 1st inst. by the Rev. Thos. G. Allen, Dr. Wm. Armstrong, to Miss Ann Lipscomb.

Also by the same, on the 9th inst. Mr. James L. Shaw, to Miss Caroline Carver, of Doylestown.

On the 5th inst. by Rev. Joseph Kennard, Mr. Nathaniel Derrickson, to Miss Hannah Furman, both of Hockley, Pa.

By the same, on the 5th inst. Mr. Aaron J. Poole, to Miss Sarah German, both of this city.

By the same, on the 8th inst. Mr. Thomas J. Handby, of Southwark, to Miss Sarah Foss, of the N. L

From Atkinson's Casket.

MELODY.

Come, strike thy harp my pretty lute,
And let its music swell,
With magic sweetness on the air,
And break eve's silent spell.

Oh! how it soothes the aching breast,
And scatters care away!
How sweetly lulls the soul to rest,
And lends with rapturous lay.

Much rising note, like budding love,
So melting and sincere;
Some seraph music from above
Seems lingering in the air.

And when thy voice gives life and rest,
To every lilting glee;
I scarcely know which to love best
Thy music, song, or thee.

Sweet strains of earth! together blend,
And in one concert run;
While some celestial notes descend
To meet you in the sun.

E. B. G.

Mrs. Sally Ann Burnhead, at Chessnuggs, (who could not have used the fork very hard on her husband, or he would have been more docile), poses Mr. B. as a silly hooby, whom she hopes the girls will not be deceived by. She describes him to be something like the tailor in the Forty Thieves—"lost feet high and as many wide."

He answers:

"My wife, without her shoes,
Is scarcely three feet seven,
While I, to all men's views,
Am full four feet eleven."

Then he continues his song thus, and that is his story:

"So when to take her down some page,
I stamp'd her feet and clever,
She made a hole right through my age,
And ran away for ever."

A BROTHERLY JOKE.—Sir William, when young, was fond of carrying some weapon with him; which habit he continued till the period of his death. One night, on leaving the Court of Exchequer at the College, he missed his cane, which had been more than once served him as a weapon of defence in early life. His servant was unable to give any account of it; which induced Sir William to exclaim with some energy, "I must be found, for with it I am in fear of no one, not even of the Devil himself." A member of the court, who was by, shrewdly remarked, "If that is the case, he had better have it put into his coffin with him."

THE GREEN GOGGLE BUGGAR.—This chap pretends to be almost blind, and suffer terribly with the eyes, for the relief of which and for the purpose of deceiving the unwary, he wears a huge pair of green goggles.—He goes round begging old clothes, and any thing he can get. His wife or mother-in-law he kicks and beats at home as if she were a dog, if she happens not to set before him quite as good a dinner as his delicate palate craves. He is quite an epicure, and will only eat venison or pheasant, canvass backs in December, and shad in March. There is not a mechanic in the city that tries hard as well as he does; indeed, if he wie should dare to set any other than a surloin steak before him she would very soon find her way into the street head foremost.

THE DUELLIST.—The Sunday Morning News, in speaking of a late affair of honor in New York, makes the following assertion in the face of all the parties concerned:—"A common duellist is either a fool or a Bond Street, mean-soul'd, and his second a knave; he engage in the quarrel with the disposition to promote it, is steeped still deeper in infamy, inasmuch as he has not the excuse of passion for his guilt."

REASON FOR BEING A BACHELOR.—"My dear Tom," said a young whipper to a bachelor friend, "it's most bad (just between you and me) that you are not married;—what's the reason, eh?—fair and hearty, well off, what's the reason?—any objection to the sex, eh?" "Wh-w-w-why, n-n-no," replied the other, winking a d-d-roguish eye at the questioner, "but yo-you-w-see I s-s-s-matter so I never could p-p-p-pop the q-q-q-question!"

The New York Times gives an account of a case of conscience, which lately occurred in that city.—The great room of the Chatham street Chapel had been hired for concerts by Mr. and Mrs. Wood.—After the first was given, the person who let the place called on the lessee, and stated that he did not like to let the building for such purposes, a place which had been set apart for worship. The lessee had not seen out the bills for the concert, and of course was in difficulty; he offered a hundred per cent. advance—that would not satisfy the man's conscience; two hundred per cent. offered—it was the nature of the music and the performers that constituted the objection. The lessee, about to depart, almost despairing of easing the man's conscience, at length offered three hundred per cent. advance. Conscience relented—the price and not the sin, settled the matter. Skilful casuist!

From the Standard of Union.

EXPUNGING ANECDOTE.

MR. WILSON: I dined a few days ago with quite an interesting party of both sexes, at the house of an old and much esteemed friend Mr. A——, who emigrated to this place a few years ago from Virginia. Mrs. A. is a true daughter of the "ancient dominion."—Every thing right there, and wrong very wrong *here*. "That is the way they do in old Virginia" is a common remark with her. Our post had just received the Richmond Enquirer and other papers, filled mainly with the "Expunging" news, which was naturally the topic before dinner. We had quite an animated political discussion. The company was pretty equally divided. The gentlemen were for expunging and the ladies against it. While at dinner a spoon was dropped and broken, which was laid to the lady by the side of her father, turned it over and its contents of meat, gravy, &c. was discharged upon Mrs. A's new silk much to her vexation and discomfiture and with more than ordinary feeling she said, "Mr. A. will have that bad boy to set at the table. I think it will be his duty after dinner to make the *Expunge* the *spoon* from the carpet!"—When dinner was over, the company retired to the parlour and Mrs. A. returning sometime afterwards to the dinning room, found the little boy with a fire coal, making a great many holes in the cloth across and around the soiled place on the carpet. In the first transport of her passion she screamed out at the top of her voice to the little boy, *you little rascal what are you about!* "I'm *expunging* the grease from the carpet!" Quit this instant, and the irritated mother, or I'll break your head—you'll spoil my carpet. Why 'tis not half the little boy's fault, is not that the way they expunge in "old Virginny."

Singular propensity of a Dog.—A gentleman who owns a farm in the vicinity of the Borough, has commenced raising a singular breed of one of his dogs, and as we have never heard of a similar case ourselves, we have thought it might also be new to some of our readers, and amusing to others. It appears, that some time past, a portion of the corn field adjoining to the dwelling-house, exhibited a number of stocks having the shuck stripped from the ears, and all the ears nearly eaten from them. As much damaging was already done and more was justly apprehended, the matter was gravely examined, and it was ascertained that it was not the work of a human being, but here the certainty ceased. If the moral character of every animal on the plantation then underwent a close scrutiny, even a venerable hound, the patriarch of the place—whose only fault consisted in occasionally sending home a rabbit, rarely a turkey, butter, without due respect to place or person, was made to bear the mark, but upon examination of he interior and inferior machinery, it was clear that whatever was his disposition, the operation of shelling the corn would have given him more pain than pleasure.

It was also clear that the corn had not allen a prey to the missing squirrel, the venomous coon or to the musky gnoe of the hence. Here the investigation was likely to be terminated, when it was observed that, of one of the dogs seemed unusually fat, and as he shared equally with two others, who retained their usual appearance, his increasing size excited suspicion. It was suggested that he had been hunting hares, but hares were not particularly abundant at the time, and his brethren were fully as fond of old field mollies as he was. Nor had he been on a visit to the Springs, for not only had he not been missed from the plantation, but upon inquiry it was ascertained from visitors who had recently returned, that although there was a great variety of puppies at different watering places in the state, no one answering his description had been seen.—Some very gravely surmised, that Satan incorporation seemed so large he must have been an alderman in some canine jurisdictry, but it was alleged that, if his size could lead us to suspect that he had swallowed a couple of volumes of a Review! Code assumed by a late Supplement, it was also evident from the firmness of his flesh and the freshness of his skin that he had thoroughly digested the pains, which was such a rare circumstance, whether among dogs or men, confined to the bench, that it was scarcely possible that he could have been engaged in such a laborious avocation.

In the mean time a watch was kept, and on Wednesday last, the farmer, with his gun well charged with hard guard seed, happened to a spot from which a fair view of the field could be had, and he had not taken his stand long, when the suspected dog was seen sneaking his way near the outer rows of the field. He was silently watched, and he soon observed to raise himself on his hind legs, deliberately peel the shucks from the ear, and then devour the corn in the most ravenous fashion. The gentleman was now satisfied that he had detected the thief, and resolving to admonish him on the spot, discharged his gun, and sprinkled him profusely with the mustard seed. The dog took the hint and in a moment scampered off at a rapid pace; but as the event only occurred on *Wednesday*, we are yet unable to inform our readers whether the dog persists in his course, and is determined to enjoy his dish of corn, even if compelled to take a little mustard sauce on the bargain.—*Norfolk Breeze.*

From the Portland Advertiser.

Brooks' Letters.

NO. LIII.

MILAN, Sept. 18th, 1835.

From Lago Maggiore, it is not a long day's journey to Milan even in a dull vetturino, which, of all the stupid modes of moving on the continent, is yet the most common I have seen. A diligence or a stage coach on the continent goes but an ordinary pace, but an Italian vetturino, in other words, a hired hack or hack carriage, is slower yet. An American or an Englishman, accustomed to the rapid motion of his own country, cannot endure them; and yet they seem here almost the only acceptable mode of conveying. The gaudily, but yet tastily dressed postilion mounted on the back of his horses, makes but a sorry figure enough, on he goes his long broken gallop, while the exterior driver sleeps and moves away his little, dreaming perhaps how he ought to go, instead of going himself. The truth is, the people here are all asleep, as compared with the Americans or English. They have not waked up yet from the torpor of centuries. Of the value of time they know but seldom the slightest idea. Our furious enterprise, if they could witness it, would make them think us mad. Think us! Italy—Italy—land of the broad spread plains of Italy, proscion of hundreds of miles of extent, there is not a rail road yet! Old as it is, famous for ages as it has been, as admirably adapted as it is for the slow power of steam, there is not a steam engine moving over it—while in the United States, among a people of yesterday, the steam engine is not only flying over the plains, but climbing the very Alleghanies themselves! These are the things that make us proud, and which give a right to us to say, that the institutions that delight the American in a foreign land, and present to his imagination the happiest visions of his country's coming glory. If they would but let us breathe our breath of life as I say—if they would give us its rich fields, and its free sky, the poor its taxes would think the Roman pole, the Jupiters, and the Saturns of old nothing in comparison with us. Yet even now they think the English are the demons of enterprise, while every day we are accomplishing even in the back woods of America what the English, spurred and goaded as they are, would hardly dare to dream of. What a falling back is in in the footmarks of the traveller who has gone six hundred miles in America in three days or less, to find six hundred miles here costing him twelve or fourteen days of I ayd. He fancies he has taken his 6 century or two, and really doubts at times whether he is the man he was when he left America.

Lago Maggiore, though not so famous as the Lake of Como, is one of the most beautifully situated lakes I have ever seen. In company with two Englishmen and two Germans, I embarked with my American companion in a little boat to visit some of the intervening islands of the lake, and then to cross it on our way to Milan. The former island that we saw, is *Isola Bella*, on which there is a palace, so richly and yet so tastefully adorned, that you must pardon me, if for once I worry you with particulars, in order to give you a faint idea of the pleasure that man can create this side of the water for themselves to dwell in. This island is built up into ten terraces that are elevated one above the other, the highest of which is one hundred and twenty French feet above the surface of the lake. A Pygmaea placed upon the height of the palace, would be as far above the tops of a pyramid where one approaches it from the eastern side. All the isle is covered with little thickets and bowers of orange trees, lemon trees, pomegranates, citrons, laurels, cedars, pinnons, vines, jessumes, and myrtles. It is embellished also by fountains, statues—and it abounds in superb pleasants. The orange trees, even three feet in diameter, almost flourish as well as in the Floridas or northern Alabama. There, upon the orange trees, loaded with flowers and fruit, you see the ripe and the blossom at the same time, and the buds of the rose and the jessume blossoming too. The eyes are delighted. All the senses in fact are charmed. The perfume of the flowers, the singing of the little birds, the sunbeams here, the garden place so lovely there, the numerous statues that watch over every turned scene and every vista, surprise you in the magic that man can impart to the earth. Then go into the palace itself. The hospitable Italian Count who owns like fairy residence, throws open every door for his servant to conduct us inward, and even left his own apartments to gratify us with a view. And what a palace he has! The Napoleons, into how many an unnecessitated eyes! the genius for the gods and sympathy for the sea,—the coral halls in which they dwell—the pebbly floors over which they tread—the shells and coloured shells where they sleep,—the images of marble, and all so like the very life—time can describe this fairy work! All is as they left it. You then the steaths come from the waters of the lake into the grotto just on its very surface, and the doubtful light makes you fancy you are there there. The upper rooms of the palace are full of paintings and sculpture. Titian is there, and then some landscapes of the famous Claude Lorraine, whose was cated here after he was assassinated he to go and to marry one whom he chosen red pretice! The paintings, to be sure, are not remarkable when compared with many other Italian galleries—at every turn you discover shells where they sleep,—the images of marble, and all so like the very life—time can describe this fairy work! All is as they left it. You then the steaths come from the waters of the lake into the grotto just on its very surface, and the doubtful light makes you fancy you are there there. The upper rooms of the palace are full of paintings and sculpture. Titian is there, and then some landscapes of the famous Claude Lorraine, whose was cated here after he was assassinated he to go and to marry one whom he chosen red pretice! The paintings, to be sure, are not remarkable when compared with many other Italian galleries—at every turn you discover such them. Fine copies in marble of celebrated antiques are to be seen, among which is a very valuable bust of Achilles. In short, if in my imagination I had some my head to draw a picture of the residence for a man of taste, I could not have found one so charming as this. Was it such a villa, think you, that Cicero had at Tusculum, or Horace near Tivoli? If so, no wonder they wrote so charmingly.

I hide nothing with reluctance, in this let le paradise, after having from its loftiest terrace taken a last view of the islands in the national defence behind me, entered a church here, a convent there, and villages all aro.ind—while in the distance were the silver tops of the Alps in view around and Fontinone, forming a magnificent back ground to the little lake which stretched toward the plains of Lombardy. We crossed over to L. rano, and then cut under the sway of the Austrian eagle. The baggage went through an examination, and the custom house officer observed that I had "many books for a traveler." Curiously scrutinizing all to see if I was smuggling politics in my new French and Italian books, examining well my letters of introduction—on the outside however, only—and then putting his brains aside to my amusement, over some of the pot-hook and trammel manuscripts of mine, which if he could read and be hanged to him, he was a lucky lad, Austrian Austria generally ignorant as they all are of all English except the common English oath, which they so well know, that all the English on the continent are known by the names of "Monsieur" or "Signor G—d d—n." Our passports were examined to see if we were Austrian Americans, but given us have to enter the Austrian dominions—Washington, (the authority who sent our passports came, being no minister, consul nor Pathington—nay were Charles's name so altered that I did not know it; and then my American companion and myself stared at well, perhaps to see if Americans are with us. We were permitted to pot on our hats, and go our way. A Frane, (a piece little less than twenty cents,) having then purchased us in the hotel only sick or water cost we could eat, and at much wine as we wanted to drink, we trafficked for vetturino, and soon were on our way to Milan, intending to take the celebrated Lake of Como in our way. Our vetturino, let me give the traveller other advice than that I gave for Switzerland. Walk but little or none in Italy. Stage as to many parts of it as the character of the roads, riding is cheaper than walking. The vetturino will carry you long distances for but trifling sums, and then as a guide and protector of the national frontiers, in coming from what it is among the mountains of Switzerland. More on this topic by and by.

Lake Como, I did not see, apostrophized as it has been by all the Poets,—even in the sweet and balmy verses of the divine Wordsworth. The truth is, Milanese have their country houses there. No doubt it is pretty—charming even, for Wordsworth writes that it is "tempered sleep in cheerful grove." but beauty is so universally lavish all around me, that I think the love of it, and almost cease to feel its inspiration, so far example, the Swiss be so excessive admirers of mountains and the charms of the maiden that be thinks but little of when a man is weaker. Beauty lavished and often causes to be beauty even. So here, there is not enough of spiness in the contrast to make beauty beautiful. The dwelling that would be a Palace in Switzerland is but a house here. The garden that would be a fairy creation there, is not a garden here. Lake Maggiore has beauty enough for me, and if Como can be prettier, I think I should not see the difference. I don't blame Virgil for extolling his native Lakes, it then is a specimen, and as for Voltaire's preference for his, it probably arose from the fact that he lived on the other side of the Alps. Let the man pewred down in torrents, and we could not deviate without too much delay, and too much exposure. We let our German friends arrange our travels, for they had a better acquaintance of Italian than we have got as yet, and they stopped us for the night at Varese, while we wanted on and laughed to see them bargain for beds, cockroaches included, every thing, and of which none need near morning I found the bite made more than a fence on which I only dare stand a traffic in an Italian Adventure. "You English," said they, "or Americans rather have to pay well for that knowledge." I don't care, said I, we have the money, we are rich, and are accustomed to pay well in England, and the Italians and Germans too intend to make them pay as well as they can. "Well, said they, we will be added, "half as much to travel as it costs you, and we have better one." I laughed and believed them. Our last night we were in France each for the same things for the sleep of trafficking at an Inn was a new idea that we did not intend to encounter again. Thus we left the shell that the Germans and Yankees at Isa, I am country behind them. One of our German friends was an Austrian, and the other, a Theologian. We met them in Milan where the last I heard of them! they were lodging for two francs a day, while for similar accommodations we were paying six. I threw out all these little things as a hint for future American travellers, for as I have said before in a former letter, as far as I can with my weak mind, I intend to give any conference as an idea of the expences in Europe as well as of what there is to see. I hope some day or other to hear of hundreds of thousands of young Americans, who will be fresh in Florence and Rome to study the works of the great Roman masters of the area, and as they unfortunately, are a little rich, I would advise them if I can, the most economical way of getting there. Consider me in Milan, if you please. B.

SHAFFTER AND SEARLE.—Every body knows, or did know, old Shaffer—the best man for a practical joke in New-England—and many have heard of Searle the fiddler, who is now either defunct or ruined by intoxication. We can tell a good story of the first, thus:—When Mr. B——, was ordained minister of the first society in E——r, N. H. Shaffer and Searle were sent for to assist the choir. Some portions of Handel's Oratorios were to be played, and the fiddle in these preludes were essential to the success of the singing. The morning came, and all was ready—when just as the leader called his choir together, it was discovered that those important personages, Shaffer and Searle, were among the missing. Here was a dilemma. However, as nothing could be done without them, messengers were dispatched in search of the delinquents—and at last they were found in the bar-room of the tavern each with a glass in hand, and as drunk as beasts. What was to be done? The congregation were assembled—the singing would be ruined without them. A consultation was held, and it was concluded to get them into the gallery, and do the best with them. So they were carried into the church, placed on seats against the wall, and their fiddles put into her hands. The music struck up. Shaffer and Searle played to admiration. They sat, reeling from side to side, now bobbing against each other—now almost tipping over, yet never falling in a single note. They had played the piece so often that it was merely mechanical. They performed the difficult solo's without a waver, and little did the sober congregation behind imagine that the sweet strains they were enjoying came from men so drunk that they could hardly sit up. At last Shaffer began to sink. He went first over upon Searle, then slid down upon the floor and lay, stretched out at full length—*but he did'nt stop his fiddle!* The music came up from under the benches, as if angels were had there. The wonder of the spectators may be conceived of. We relate this as confidence of its truth, for we were in the gallery ourself.—*Boston Galaxy.*

Every body condemns scandal, yet nothing circulates more readily. Even gold is less current.

From the American Magazine of Useful Knowledge.

MILITARY ADVANTAGE OF RAIL ROADS.

General Gaines, of the United States' Army, in a long letter respecting certain proposed rail roads in Texas and the neighboring states, takes the following professional view of the subject. It probably has not occurred to most people to consider it in this light.

In reference to the military aspect of the subject of rail roads with steam power applied to vehicles of land transportations, I have much to say, more indeed, than I can flatter myself with a hope that the committee of the legislature would feel inclined during the present season to hear. It is a subject so much altogether within the unquestionable sphere of my professional vocation—a subject too, of such tremendous and awful import, when taken into consideration of the national defence, that I have felt it to be an much my duty for some five years past, to devote my attention to it, as I ever devoted it, in obedience to my official oath, to meet in battle my country's enemy. It is preposterous and awful, because it is destined soon to enable us the people of the United States with the aid of our State governments, and our United States government to wield with irresistible effect all the vast elements of the military power and countless resources of the central and interior States and their physical, and moral power of our national frontier in time to crush the invader, strong as he may be before he could possibly take any one of our first rate fortifications if prepared for a vigorous defence; and without an expense of more than one tenth of time or of money than the present and all former means of national defence required—with little or no expense on our part of health or of life. The subject is awful because it places at the control of instructed man, a power which hitherto, from the beginning of the world up to the present age was believed to belong only to Him who created and who controuls to eternity the elements of all power! It presumes to us the means of wielding without the usual animal power, from this spot to an Atlantic seaport, distant six hundred miles, with seventy-two locomotive engines, an army of one hundred thousand men, and six hundred tons, of cannon or other arms, in sixty hours—a the short space of sixty hours! A cargo of men and arms that would with our present roads require thirty-six hundred draught horses and six thousand wagons, to convey the baggage and ordnance and stores of the army the same distance—whilst the 6,000 wagons and 36,000 horses would cost $3,600,000

And the cost of the 72 locomotives at $5,500 each, would be but 396,000

Making a difference in money of $3,204,000

Three millions two hundred and four thousand dollars in favor of the rail road movement, in the march of one hundred thousand men in the space of sixty hours. Besides a difference in time of a pyramid where one approaches it from the eastern side. All the isle is covered with little thickets and bowers of orange trees, lemon trees, pomegranates, citrons, laurels, cedars, pinnons, vines, jessumes, and myrtles. It is embellished also by fountains, statues—and it abounds in superb pleasants. The orange trees, even three feet in diameter almost flourish as well as in the Floridas or northern Alabama. There, upon the orange trees, loaded with flowers and fruit, you see the ripe and the blossom at the same time, and the buds of the rose and the jessume blossoming too. The eyes are delighted. All the senses in fact are charmed. The perfume of the flowers, the singing of the little birds, the sunbeams here, the garden place so lovely there, the numerous statues that watch over every turned scene and every vista, surprise you in the magic that man can impart to the earth. Then go into the palace itself. The hospitable Italian Count who owns like fairy residence, throws open every door for his servant to conduct us inward, and even left his own apartments to gratify us with a view. And what a palace he has! The Napoleons, into how many an unnecessitated eyes! the genius for the gods and sympathy for the sea,—the coral halls in which they dwell—the pebbly floors over which they tread—the shells and coloured shells where they sleep,—the images of marble, and all so like the very life—time can describe this fairy work! All is as they left it. You then the steaths come from the waters of the lake into the grotto just on its very surface, and the doubtful light makes you fancy you are there there. The upper rooms of the palace are full of paintings and sculpture. Titian is there, and then some landscapes of the famous Claude Lorraine, whose was cated here after he was assassinated he to go and to marry one whom he chosen red pretice! The paintings, to be sure, are not remarkable when compared with many other Italian galleries—at every turn you discover such them. Fine copies in marble of celebrated antiques are to be seen, among which is a very valuable bust of Achilles. In short, if in my imagination I had some my head to draw a picture of the residence for a man of taste, I could not have found one so charming as this. Was it such a villa, think you, that Cicero had at Tusculum, or Horace near Tivoli? If so, no wonder they wrote so charmingly.

I hide nothing with reluctance, in this let le paradise, after having from its loftiest terrace taken a last view of the islands in the national defence behind me, entered a church here, a convent there, and villages all aro.ind—while in the distance were the silver tops of the Alps in view around and Fontinone, forming a magnificent back ground to the little lake which stretched toward the plains of Lombardy. We crossed over to L. rano, and then cut under the sway of the Austrian eagle. The baggage went through an examination, and the custom house officer observed that I had "many books for a traveler." Curiously scrutinizing all to see if I was smuggling politics in my new French and Italian books, examining well my letters of introduction—on the outside however, only—and then putting his brains aside to my amusement, over some of the pot-hook and trammel manuscripts of mine, which if he could read and be hanged to him, he was a lucky lad, Austrian Austria generally ignorant as they all are of all English except the common English oath, which they so well know, that all the English on the continent are known by the names of "Monsieur" or "Signor G—d d—n." Our passports were examined to see if we were Austrian Americans, but given us have to enter the Austrian dominions—Washington, (the authority who sent our passports came, being no minister, consul nor Pathington—nay were Charles's name so altered that I did not know it; and then my American companion and myself stared at well, perhaps to see if Americans are with us. We were permitted to pot on our hats, and go our way. A Frane, (a piece little less than twenty cents,) having then purchased us in the hotel only sick or water cost we could eat, and at much wine as we wanted to drink, we trafficked for vetturino, and soon were on our way to Milan, intending to take the celebrated Lake of Como in our way. Our vetturino, let me give the traveller other advice than that I gave for Switzerland. Walk but little or none in Italy. Stage as to many parts of it as the character of the roads, riding is cheaper than walking. The vetturino will carry you long distances for but trifling sums, and then as a guide and protector of the national frontiers, in coming from what it is among the mountains of Switzerland. More on this topic by and by.

Lake Como, I did not see, apostrophized as it has been by all the Poets,—even in the sweet and balmy verses of the divine Wordsworth. The truth is, Milanese have their country houses there. No doubt it is pretty—charming even, for Wordsworth writes that it "tempered sleep in cheerful grove." but beauty is so universally lavish all around me, that I think the love of it, and almost cease to feel its inspiration, so far example, the Swiss be so excessive admirers of mountains and the charms of the maiden that be thinks but little of when a man is weaker. Beauty lavished and often causes to be beauty even. So here, there is not enough of spiness in the contrast to make beauty beautiful. The dwelling that would be a Palace in Switzerland is but a house here. The garden that would be a fairy creation there, is not a garden here. Lake Maggiore has beauty enough for me, and if Como can be prettier, I think I should not see the difference. I don't blame Virgil for extolling his native Lakes, it then is a specimen, and as for Voltaire's preference for his, it probably arose from the fact that he lived on the other side of the Alps. Let the man pewred down in torrents, and we could not deviate without too much delay, and too much exposure. We let our German friends arrange our travels, for they had a better acquaintance of Italian than we have got as yet, and they stopped us for the night at Varese, while we wanted on and laughed to see them bargain for beds, cockroaches included, every thing, and of which none need near morning I found the bite made more than a fence on which I only dare stand a traffic in an Italian Adventure. "You English," said they, "or Americans rather have to pay well for that knowledge." I don't care, said I, we have the money, we are rich, and are accustomed to pay well in England, and the Italians and Germans too intend to make them pay as well as they can. "Well, said they, we will be added, "half as much to travel as it costs you, and we have better one." I laughed and believed them. Our last night we were in France each for the same things for the sleep of trafficking at an Inn was a new idea that we did not intend to encounter again. Thus we left the shell that the Germans and Yankees at Isa, I am country behind them. One of our German friends was an Austrian, and the other, a Theologian. Super Patent Fountain Pens,

DECIDEDLY the greatest improvement in steel pens, ever offered to the public! Distinguished for its all other fountain pens, by being formed out of only one piece of steel, consequently not liable to fall to pieces, yet adhering perfectly for cleaning. For sale, wholesale and retail, at the new hat lock manufactory, and fancy store, No. 30 Market st.

my 7—3t* T. HORTER.

MACHINE CARDS.

THE Undersigned manufacturers of COTTON & WOOLLEN MANUFACTURE and CLOTHIERS is general, that he has on hand, and is receiving from time to time, from the most approved makers, a general assortment of MACHINE CARDS, and respectfully solicits the trade connecting in part of the following kinds, viz:

Machine Cards,	Roller Cards,
Cylinder do.	Roller Clothing,
Card Clothing, Patent,	Wire do.
Tenter Hooks,	Weaving do.
Card Wire,	Napping do.
Card Teasers,	Shear Grinders,
Card Grinders,	Card do.
Stock Cards,	Common Triangular,
Binery and Glass,	Brushes,
Cotton do.	Brooms,
Cotton Bandying,	Wire do.
Bandying Cards,	Card Brushes,
Bandying and Bands,	Double Twine,
Hand Leathers,	Bandying do.
Belt Leathers,	Bandying do. Waterbands,
Leather Belting do.	Shuttles & Pipes, &c. &c.

The above articles he sells on the most favorable terms, and to which he solicits the attention of purchasers.

Cotton and Wool Cards, warranted, furnished to order.

Cotton and Wool Cards, repaired, furnished to order.

N. B. Cards taken in exchange.

DR. JUDKINS'

OINTMENT

FOR the cure of Water Swellings, Sore Legs and Lower Glandular Tumours, Fistula, Rheumatic Pains, Burns, and Bruises, Sore Breasts, Sore Nipples, Piles, Ulcers, Scrofula, Scald Head, Ringworm, Tetter, Chilblains, Glandular Swellings, Old and Fresh Wounds, Chilblains, Corns, Tetter, Ringworm, Scald Head, Sore Breasts, Sore Nipples, Piles, Ulcers, Scrofula, Burns and Sore Eyes.

It has cured 20 of my directions. I buy here to state to the public, that there has been an article of the kind bearing my name, which has been extensively sold in this city and elsewhere, but which I am sorry to say, is not well prepared, per the same, except at one or two places, I have no agent, and all who have been imposed by JAMES S. GLASCOE, only, and take pleasure in recommending the genuine DR. WILLIAM JUDKINS' SPECIFIC OINTMENT, as every box will be inspected by me before leaving my hands.

The public, therefore, are cautioned against purchasing any box that does not the fac simile of my signature, and the signature of JAS. S. GLASCOE, in his own handwriting, in connection that I have put up.

In addition, sir, I have produced a few certificates of cures performed by me, and which I have published in the Congress of the United States, as well as the very first scientific characters in the country, known to the public, and which I will cheerfully, and when I can, exhibit the evidence which has been given in such flattering terms, to so many extended cures, of a disease which has long baffled all I wish and had caused many ordinary practitioners, (ignorantly be it said,) to pronounce it a disease which, if it did not kill, rendered the sufferer a burden to himself and his friends, and which only relief was to be found in the use of the Ointment, which I have now for sale, and shall continue to do, that those who may be afflicted with any of the diseases above named, may get it a fair trial before they pronounce it to be fully competent to relieve, correctly, all or any.

WM. JUDKINS.

Cincinnati, Ohio.

N. B. A constant supply of the above, will be kept on hand at Foster Lehman's Drug and Chemical Store, No. 38 Market street, Philada.
